PREROGATIVE ROYAL. In England the sovereign is the supreme magistrate, and it is a

maxim that he can do no wrong. He is the head of the established church, of the army and navy, and the fountain of office, honour, and privilege, but is subject to the laws, unless exempted by name. The royal prerogatives were greatly exceeded by several despotic sovereigns, such as Elizabeth, James I., and Charles I. Elizabeth used the phrase "We, of our Royal prerogative, which we will not have argued or brought in question" (1591).

James I. told his parliament "that as it was blasphemy to question what the Almighty could do of His power, so it was sedition to inquire what a king could do by virtue of his prerogative." These extreme doctrines were nullified by the revolution of 1688, and the exercise of the prerogative is now virtually subject to parliament; see Lords.

PRINTING IN COLOURS was first commenced by the employment of several blocks, to imitate the initial letters in MSS. (for instance, the Mentz Psalter of First, 1455, which has a letter in three colours). Imitations of chlaroscuro soon followed ("Repose in Exypt," engraving on wood after Louis Cranach, in 1510, in Germany; others by Ugo da Carpi, in Italy, 1518).

B. Jackson (1720-54) attempted, without success, to imitate water-colour drawings, and to print paperhangings.

About 1783, John Skippe, an amateur, printed some

chiaroscuros.

In 1319-22, Mr. William Savage produced his remarkable work, "Hints on Colour Printing," illustrated by imitations of chiaroscuro, and of coloured drawings, giving details of the processes employed.

In 1836. Mr. George Baxter produced beautiful specimens of Picture-Printing, and took out a patent, which expired in 1855. In some of the illustrations to the "Pictorial Album" (1836), he employed twenty different blocks.

In 1849, Mr. G. C. Leighton produced imitations of water-colour drawings, by means of modifications and improvements of Sawage's processes. In 1851 he commenced colour-printing by machinery, and has since availed himself of aqua-tinted plates, and also of electrotyped silver and copper surfaces to obtain purity of colour as well as durability.

The large coloured prints of the Illustrated London News were first issued in Dec. 1856.

PRIVATEER, a ship belonging to private individuals, sailing with a licence (termed a Letter of Marque), granted by a government in time of war, to seize and plunder the ships of the enemy. The practice, said to have been adopted by Edward I. against the Portuguese in 1295, was general during the war between Spain and the Netherrai during the war between spain and the Archer-lands in the 17th century, and during the last French war. Privateering was abolished by the great sovereigns of Europe by treaty, 30 March, 1856. The United States government refused to agree unless the right of blockade was also given up. The British government declined this, asserting "that the system of commercial blockade was essential to its naval supremacy." On 17 April, 861, Jefferson Davis, president of the southern confederacy, announced his intention of issuing etters of marque, and on the 19th president Lin-In proclaimed that all southern privateers should treated as pirates. This decree was not carried ut: see United States. All the great powers forbade privateering during the American civil we (which see). By the treaty of Washington pure teering was prohibited.

A mine was discovered at Ceylon in 1797; and at New Almaden and other places in California. Quicksilver was congealed in winter at St. Petersburg, in 1759. It congessed in winter at 5t. QUIETISM, the dectrine of Miguel Molinos, a Spaniard (1627-96), whose work, the "Spiritual Guide," published in 1675, was the foundation of a sect in France. He held that religion consisted in an internal silent meditation on the merits of Christ and the mercies of God. Madame de la Mothe-Guyon, a quietist, was imprisoned in the Bastile for her visions and prophecies, but released through the interest of Fénélon, archbishop of Cambray, between whom and Bossuet, bishop of Meaux, arose a controversy, 1697. Quietism was finally condemned by pope Innocent XII. in 1699.

Scott, in Oct. 1865.—Quinodining see Fluorescenes. John Eliot Howard, promoter of the cultivation of cin-chona in India, and author of "Quinologia" (1862) died 22 Nov. 1883.

QUINQUAGESIMA SUNDAY. The observation is said to have been appointed by Gregory the Great (pope, 590-604). The first Sunday in Lent having been termed Quadragesima, and the three weeks preceding having been appropriated to the gradual introduction of the Lent fast, the three Sundays of these weeks were called by names significant of their position in the calendar: and reckoning by decades (tenths), the Sunday preceding Quadragesima received its present name, Quinquagesima, the second Sexagesima, and the third Septuagesima.

QUINTILIANS, heretics in the 2nd century, the disciples of Montanus, who took their name from Quintilia, a lady whom he had deceived by his pretended sanctity, and whom they regarded as prophetess. They made the eucharist of breal and cheese, and allowed women to be priests and bishops. Pardon.

RADICALS or "RADICAL REFORMERS," persons who professed to aim at procuring a thorough reformation in the government and policy of England, became prominent in 1816, when Hampden clubs were formed, of which sir Francis Burdett, lord Cochrane, major Cartwright, and William Cobbett were prominent members. Samuel Bam-Cobbett were prominent members. Samuel Bamford's "Life of a Radical," published in 1842, gives much information; he died 13 April, 1872. Many

radicals were severely punished, 1817-20. Wm. Harris's "History of the Radical Party," published early in 1885.—The "Radicals" in the United States were the party headed by Thaddeus Stevens, bitterly opposed to the policy of president Johnson, as too favourable to the subdued Southern States.

The Radical Programme, advocated by the rt. hon. Joseph Chamberlain, widely circulated, first appeared July, 1885, in the Fortnighty Review; it included reform of the land laws, free education, increased local government, reform in taxation and finance, improvement of condition of agricultural labourers and of the poor, and religious equality and dis-establishment of national churches. RAGGED SCHOOLS, free schools for outcast destitute ragged children, set up in large towns. The instruction is based on the scriptures, and most of the teachers are unpaid. REVISING BARRISTERS' COURTS, to examine the lists of voters for members of parliament, were instituted by the Reform Act of 1832.

REVISION, see under Bible. Advocates of the revision of the French constitution, chiefly Bonapartists or Jeromists, termed Revisionists, Feb. 1884.

REVIVALS on the subject of religion arose in the United States in 1857. In the autumn of 1859, they began in Scotland, the north of Ireland (particularly Belfast), and England. Many meetings were held for prayers and preaching throughout the week, as well as on Sundays. The "twetve days' mission," a series of revival services, took place in many London churches during advent, 1869.

Mr. Moody, preacher, and Mr. Sankey, singer, American Revivalists, visited many towns in the United Kingdom, 1874-5. Their meetings in London began at the Agricultural Hall, 9 March, about 15,000 present; at the Queen's theatre, Haymarket, 12 April-31 May; farewell meeting, 12 July, 1875. ^{*} In 1844, when the czar was in England, he conversed with the duke of Wellington and lord Aberdeen (whom he had known many years) respecting the dissolution of the Turkish empire; and on his return he embodied his the Turkish empire; and on his return he embodied his views in a memorandum drawn up by count Nesselrode, which was transmitted to London, but kept secret till March, 1854. In January and February of that year the Eart had several conversations on the subject with the British envoy at St. Petersburg, sir G. H. Seymour, in one of which (Jan. 14) he compared Turkey to a "sick man" in a state of decrepitude, on the point of death, and made proposals to the British government as to the disposal of his property. He stated frankly that he would not permit the British to establish themselves at Constantinople: but said in another conversation. he Constantinople; but said in another conversation, he would not object to their possessing Egypt. The pur-port of these conversations was conveyed in despatches to lord John Russell, who replied that the British government declined to make any provision for the contingency of the fall of Turkey. The exar made similar proposals to the French government with the same result.

RYE-HOUSE PLOT, a plot (some think pretended) to secure the succession of the duke of Monmouth to the throne in preference to the duke of York (afterwards James II.), a Roman catholic. Some of the conspirators are said to have projected the assassination of the king, Charles II., and his brother. This design is said to have been frustrated by the king's house at Newmarket accidentally taking fire, which hastened the royal party away eight days before the plot was to take effect, 22 March, 1683; see Newmarket. The plot was discovered 12 June following. Lord William Russell on 21 July, and Algernon Sidney on 7 Dec. following, suffered death for being concerned in this conspirators' place of meeting, the Rye-house at Broxbourne, Hertfordshire.

SAALFIELD (Saxony, N. Germany). Here the Prussians, under prince Louis of Prussia, were defeated and their leader slain by the French under Lannes, 10 Oct. 1806.

SAARBRÜCK, the Roman Augusti Muri or Saræ pons, an open town on the left bank of the Saar, in Rhenish Prussia, founded in the tenth century, long subject to the bishops of Metz, afterwards ruled by counts (about 1237), and by the house of Nassau about 1380. It was captured by the French and retaken by the Germans 1676, reunited to France 1794-1814, and ceded to Prussia, 1815. On 2 Aug. 1870, it was bombarded by the French under Frossard (between 11 and 1 in the daytime), and the Prussians in small force were dislodged, and the town occupied by the French general Bataille. The mitrailleuses were said to be very effective. The emperor Napoleon, who was present with his son, said in a telegram to the empress, "Louis has gone through his baptism of fire. He has not been in the least startled. We stood in the foremost rank, and the rifte balls were dropping at our feet, and Louis picked up one that fell near him. His bearing was such as to draw tears from the soldiers' eyes." On the 6 Aug. the Prussian generals Goben and Von Steinmetz, with the first army, recaptured Saarbruck, after a sanguinary conflict at the village of Spicheren. The heights taken by the French on the 2nd are in Germany, those taken by the Germans on the 6th are in France, and both battles were fought between Saarbruck and the town of Forbach, which was captured and has given a name to the second conflict. The loss was great on both sides. The French general François was killed, and the 2nd corps under Frossard nearly destroyed. The French retreated to Metz. They were greatly superior in numbers at the beginning of the fight, but were badly commanded.

SABBATARIANS. Traces exist of Sabbatarii, or Sabbathaires, among the sects of the 16th century on the continent. Upon the publication of the "Book of Sports" in 1618, a violent controversy arose among English divines on two points: first, whether the Sabbath of the fourth commandwas in force among Christians; and secondly, whether, and on what ground, the first day of the week was entitled to be distinguished and observed as "the Sabbath." In 1628, Theophilus Brabourne, a clergyman, published the first work in favour of the Seventh-day or Saturday, as the true Christian Sabbath. He and several others suffered great persecution for this opinion; but after the restoration there were three or four congregations observing the last day of the week for public worship in London, and seven or eight in the country parts of England. In 1851 there were three Sabbatarian or Seventh-day Baptist congre-gations in England; but in America (especially in the New England states) they are more numerous.—Joseph Davis suffered imprisonment in 1670. He and his son bequeathed property to maintain the sect; and litigation respecting its disposal was settled by vice-chancellor Stuart in conformity with their intentions in June, 1870. Very few Sabbatarians then remained.

SABBATH: ordained by God. Gov. in Exod. xx. 8; Isaiah lviii. 13. SABELILIANISM, from Sabellius (of Prismais in Egypt), who flourished in the 3rd century, and who taught that there was but one person the Godhead, the other persons of the Trinity being but different names of the same person. The doctrine was condemned at a council at Rome, 200.

SAFETY LAMP. One was invented in 1815 by sir Humphry Davy, to prevent accidents which happen in coal and other mines. The safety-lamp is founded on the principle that flame, in passing through iron-wire meshes, loses so much of its heat as to be incapable of igniting inflammable gases. The father of all safety-lamps was Dr. Reid Clanny, of Sunderland, whose invention and improvements are authenticated in the Transactions of the Society of Arts for 1817. The "Geordy," constructed by George Stephenson, the engineer, in 1815, is said to be the safest. A miner's electric light, by MM. Dumas and Benoit, was exhibited in Paris on 8 Sept. 1862. On 14 Aug. 1867, safety-lamps were rigidly tested by several mining engineers, and serious doubts thrown upon their complete efficacy. Col. Shakespear's safety lamp (light extinguished by opening) exhibited at Royal Institution, &c., May, 1879. Messrs. Fleuss and Foster's new safety mining lamp approved, Jan. 1884.

SALT (chloride of sodium, a compound of the gas chlorine and the metal sodium) is procured from the rocks in the earth, from salt-springs, and from sea-water. The famous salt-mines of Wielitzka, near Cracow in Poland, have been worked 600 years. The salt-works in Cheshire, called the WICHES (Nantwich, Northwich, and Middlewich), were of great importance in the time of the Saxon heptarchy. The salt-mines of Staffordshire were discovered about 1670. Salt duties were first exacted in 1702; they were renewed in 1732; reduced in 1823; and in that year were ordered to cease in 1825. During the French war the duty reached to 30L per ton. For the salt-tax in France see Gabells. The government salt monopoly in India was abolished in May, 1863, by sir C. SALT-PETRE (from sal petræ, salt of the rock), or Nitre, is a compound of nitric acid and potash (nitrogen, oxygen, and potassium), and hence is called nitrate of potash. It is the explosive ingredient in gunpowder, many detonating powders, and lucifer matches. Boyle in the 17th century demonstrated that salt-petre was composed of aqua fortis (nitric acid) and potash; the discoveries of Lavoisier (1777) and Davy (1807) showed

its real composition. Its manufacture in England During the French revolubegan about 1625. tionary war, the manufacture was greatly increased by the researches of Berthollet.

SALUTE AT SEA. It is a received maxim at sea, that he who returns the salute always fires fewer guns than he receives, which is done even between the ships of princes of equal dignity; but the Swedes and Danes return the compliment without regarding how many guns are fired to them. SCOURING OF THE WHITE HORSE. ** Ashdown.

SCREW, was known to the Greeks. The umping-screw of Archimedes, or screw-cylinder or raising water, invented about 236 B.C., is still n use. It is stated that with the assistance of the crew, one man can press down or raise up as much s 150 men can do without it.—The Screw-Proseculer consists of two or more twisted blades, ke the vanes of a windmill, set on an axis, runing parallel with the keel of a vessel, and revolving eneath the water at the stern. It is driven by

ing parallel with the keel of a vessel, and revolving eneath the water at the stern. It is driven by steam-engine. The principle was shown by Iooke in 1681, and since by Du Quet, Bernouilli, and others. Patents for propellers were taken out y Joseph Bramah in 1784; by Wm. Lyttelton in 794; and by Edward Shorter in 1799. But these id to no useful result. In 1836 patents were obsined by Francis Pettit Smith (knighted July, 871; died, 12 Feb. 1874) and captain John Ericson (died, aged 86, March, 1889); and to them the uccessful application of the screw-propeller must attributed. The first vessels with the screw were he Archimedes, built on the Thames in 1838 by I. Wimshurst, and the Rattler, built in the United states (1844), and tried in England in 1845. Double screw-propellers are now employed. A new orm of screw-propeller invented by col. W. H. stallory, of U. S. A. army, was tried on the Thames and reported successful, Aug. 1878.

SCRUTIN (French for ballot). In scrutin de iste the voter writes on his paper as many names as there are persons to be elected, for instance for he whole department. In scrutin d'arrondissement, he members are elected separately. The adoption of one of these modes was much discussed in France n 1875. The conservatives prefer the latter, the adicals the former. See France, Nov. 1875. The cerutin de liste was adopted in the elections of 1848, 1849, 1871, and 1875.

31 Rardoux's bill for adopting the scrutin de liste (warmly advocated by M. Gambetta), was passed by the chamber of deputies (24,2-23), 18 May, 188; rejected by the senate (148-114), 9 June, 1881; again rejected, Jan.

## SCULLABOGUE, see Massacres, 1798.

SCULPTURE is said to have begun with the Experians. Bezaleel and Aholiab built the tabernacle in the wilderness, and made all the vessels and ornaments, 1401 B.C., and their skill is recorded as the gift of God. Exod. xxxi. 3. Dipœnus and Scyllis, statuaries at Crete, established a school at

Sicyon. Pliny speaks of them as being the first who sculptured marble and polished it; all statues before their time being of wood, 568 s.c. Alexander gave Lysippus the sole right of making his statues, 326 s.c. He left no less than 600 pieces, some of which were so highly valued in the age of Augustus, that they sold for their weight in gold. Sculpture did not flourish among the Romans, and in the middle ages with some fine exceptions, was generally degraded. With the revival of painting, it revived also; and Donato di Bardi, born at Florence, A.D. 1383, was the earliest professor among the moderns. An institute of sculptors was established in 1861. The Romans in the time of the Tarquins (about 600 B.C.) had genmed rings. They sealed rooms, granaries, bags of money, &c. The German emperor, Frederick I. "A seal with armorial bearings before the 11th century, is certainly false." Fosbroke. The most ancient English seal with arms on it is said to be that of Richard I. or John. White and coloured waxes were used. Our present sealingwax, containing shellac, did not come into general use in Germany and England until about 1556. It is not against Christianity, but independent of it. Its standardis utilitarian; it is the religion of the present life only; teaching men to seek morality in nature, and happy teaching men to seek morality in nature, and happyness in duty. SEDAN, an ancient fortified city in the valley of the Meuse, N.E. of France, the seat of a principality long held by the dukes of Bouillon. On 6 July, 1641, a victory was gained at La Marfée, near Sedan, by the count of Soissons and the troops of Bouillon and other French princes, over the royal army supporting Richelieu; but the count was slain on 23 June, 1642. The duke was arrested in the midst of his army, and was made to cede Sedan to the crown. The protestant university was abolished after the revocation of the edict of Nantes, 22 Oct. 1685. Around this place a series of desperate conflicts on 29, 30, and 31 Aug. between the French army of the north, under marshal MacMahon (about 150,000 men), and the greater part of the three German armies under the king and crown-prince of Prussia and the crown-prince of Saxony (about 250,000 men) was brought to a close on I Sept. 1870.

The battle began with attacks on the French right and ne datable began with access on the French right and left about 5 a.m., and was very severe at 2 p.m. At 4 p.m. the Germans remained masters of the field, and the crown-prince of Prussia announced a complete victory, the chief part of the French army retreating into Sedan.

The emperor Napoleon was present during the battle, and, it is said, stood at Iges, near Sedan, exposed for four hours to the German grenades. The impossibility of further resistance was then evident. The Germans had contracted their circle close round Sedan; their formidable artillery held all the heights, from which they midable artillery held all the heights, from which they could at pleasure wholly destroy the town and the army, and only 2000 men were in a condition to respond to their commander's call, and to make a supreme effort to break through the enemy with the emperor and escape to Montmedy. At first general de Wimpffen (called to the command when MacMahon was wounded) indignantly rejected the terms offered by the victor, and the emperor had a fruitless interview with count Bismarck to endeavour to mitter them.

to mitigate them.

On 2 Sept. the emperor wrote in autograph to the king of Prussia, "Mon frère, n'ayant pu mourir à la tête de mes troupes, je dépose mon épée au pied de votre majesté. NAPOLEON." A capitulation of Sedan and the whole army therein was signed by generals Von Moltke and De Wimpffen at the château of Bellevue, near Frenois, at 11.30 a.m., and at 2 p.m. an interview took place between the king and the emperor, who was downcast but dignified.

was downcast but dignined.
The conflict was principally carried on by the artillery,
in which (according to the emperor) the Germans had
the advantage, not only in number (600 to 500), but
also in weight, range, and precision. The carnage was
awful, and the field the next day was a mass of shat-

tored bones, torn flesh, and coloured rags.

About 25,000 French prisoners were taken in the battle, and 83,000 surrendered the next day, together with

70 mitrailleuses, 400 field-pieces, and 150 fortness guns. About 14,000 French wounded were found lying in the neighbourhood, and about 3000 escapied into Beigium and laid down their arms. The great army of the north had ceased to exist. Among the killed was lieut-col. Pemberton, a correspondent of the Times, who had approached too near the conflict. The French emperor and his suite arrived at Wilhelmshube. a costle near Cassel ancointed for his residence.

On r Sept. the village of Bazeilles was stormed by the Bavarians and burnt, it was said, because the inhabitants fired on the ambulances; many women and children perished. The French denied the provocation. The place had been previously twice bombarded and stormed by the maddened combatants.

In a letter dated 12 May, 1872, the emperor Napoleon took upon himself the whole responsibility of the surrender of Sedan.

SEDAN CHAIRS (so called from Sedan), were first seen in England in 1581. The Romans wore an ivory creacent on their shoes; and Caligula enriched his with precious stones. In England, about 1462, the people wore the beaks or points of their shoes so long that they encumbered themselves in walking, and were forced to tie them up to their knees; the fine gentlemen fastened theirs with chains of silver or silver gilt, and others with laces. This was prohibited, on the forfeiture of 20s. and on pain of being cursed by the clergy, 7 Edw. IV. 1467; see Dress. Shoes, as at present worn, were introduced about 1633. SICILIAN VESPERS, the term given to the assacre of the French (who had conquered Sicily, 66), commenced at Palermo, 30 March, 1282.

Easter Monday conspirators assembled at Palermo; and while the French were engaged in festivities, a Sicilian bride passed by with her train. One Drochet, a Frenchman, used her rudely, under pretence of searching for arms. A young Sicilian stabbed him with his own sword; and a tumult ensuing, 200 French were instantly murdered. The populace ran through the city, crying out, "Let the French die!" and, without distinction of rank, age, or sex, slaughtered all of that nation they could find, to the number of about 5000. Even the churches proved no sanctuary, and 8000. Even the churches proved no sanctuary, and the massacre became general throughout the island.

SICILY (anciently Trinacria, three-cornered). The early inhabitants were the Sicani, or Siculi, a people of Spain, and Etruscans, who came from Italy arrived eighty years before the destruction of Troy, 1284 B.C. The Phænicians and Greeks settled some colonies here (735-582). It is supposed that Sicily was separated from Italy by an earthquake, and that the straits of the Charybdis were thus formed. Its government has frequently been united with and separated from that of Naples (which see); the two now form part of the kingdom of Italy. Population of Sieily in 1856, 2,231,020; 1871, 2,565,323;

SILISTRIA, a strong military town in Bul-aria, European Turkey. It was taken by the Russians, 30 June, 1829, and held some years by them as a pledge for the payment of a large sum by the Porte; but was eventually returned. SLAVE TRADE. The slave trade from Congou and Angola was begun by the Portuguese in 1481. The commerce in man has brutalised a tract fifteen degrees on each side of the equator, and forty degrees wide, or of 4,000,000 of square miles; and men and women have been bred for sale to the Christian nations during the last 250 years, and war carried on to make prisoners for the Christian market. The Abbé Raynal computed (1777) that, at the time of his writing, 9,000,000 of slaves had been consumed by the Europeans. The slave-trade is now approaching extinction.

In 1768 the slaves taken from Africa amounted to 104,100. In 1786 the annual number was about 100,000. In 1807 it was shown by documents, produced by government, that since 1792 upwards of 3,500,000 African had been torn from their country, and had either perished on the passage or been sold in the West Indies. SOUND, see Acoustics.

SOUND DUTIES. Till the year 1857 no merchant ship was allowed to pass the Sound (a narrow channel separating Zcaland from Sweden) without clearing at Elsinore and paying toll. These duties had their origin in an agreement between the king of Denmark and the Hanse towns (1348), by which the former undertook to maintain lighthouses, &c., along the Cattegat, and the latter to pay duty for the same. The first treaty with England in relation to this was in 1450; other countries followed. In 1855 the United States determined to pay the dues no more; and in the same year the Danish government proposed that these dues should be capitalised; which was eventually agreed to, the sum being 30,476,325 rixdollars. In Aug. 1857, the British government paid 10,126,855 rix-dollars (1,125,2061) to the Danes as their proportion.—The passage of the Sound was effected, in defiance of strong fortresses, by sir Hyde Parker and lord Nelson, 31 March, 1801; see Baltie Expedition.

SOUNDINGS AT SEA. Captain Rosa, of H.M.S. Edipus, in 1840, took extraordinary soundings at sea. One taken 900 miles west of St. Helena, extended to the depth of 5000 fathoms. In the latitude 33° S. and longitude 9° W. about 300 miles from the Cape of Good Hope, 2266 fathoms were sounded; the weight employed amounted to 450 lbs. On 13 July, 1857, lieut. Joseph Dayman, in the North Atlantic Ocean, lat. 51° 9′ N., long. 40° 2′ W., in sounding, found a bottom at 2424 fathoms. The deepest sounding known (3875 faths.) was taken by the Challenger, capt. Nares, 24 March, 1873, in the North Atlantic, north of St. Thomas's.

SPANISH GRANDEES, the higher nobility, at one time almost equal to the kings of Castile and Aragon, and often setting their authority at defiance, were restrained on the union of the crowns by the marriage of Ferdinand and Isabella in 1474, who compelled several to relinquish the royal fortresses and domains which they held. Charles V. reduced the grandees to sixteen families (Medina-Sidonia, Albuquerque, &c.), dividing them into three classes.

SPECIES. Much controversy among naturalits arose in consequence of the publication, in 1859, f Mr. Charles Darwin's "Origin of Species," in hich he suggests that all the various species of mimals were not created at one time, but have en gradually developed by what he terms "natural election," and the struggle for life in which the rong overcome the weak.

This preservation of favourable individual differences and variations, and the destruction of those which are injurious, I have called natural selection, or the survival of the fittest."—Darwin.

vival of the fittest."—Darcin.

Ine idea was put forth by Lamarck in his "Philosophie Zoologique," 1809. Similar views appear in the "Vestiges of Creation," 1844. Mr. Darwin says, that he infers "from analogy that probably all the organic beings which have ever lived on the earth have descended from some one primordial form, into which life was first breathed by the Creator." SPECIFIC GRAVITIES. See under Weights.

SPECTACLES, unknown to the ancients, are generally supposed to have been invented by Alexander de Spina, a monk of Florence, in Italy, about 1285. According to Dr. Plott, they were invented by Roger Bacon, about 1280. Manni attributes them to Salvino, who died 1317. On his tomb at Florence is the inscription, "Qui giace Salvino degli Armati, inventore degli occhiali: Dio gli per-doni le peccata" ("Here lies Salvino degli Armati, inventor of spectacles: May God pardon his sins").

SPECTATOR. The first number of this periodical appeared on I March, 1711; the last was No. 635, 20 Dec. 1714. The papers by Addison have one of the letters C L I o at the end. The most of the other papers are by sir Richard Steele, a few by Hughes, Budgell, Eusden, Miss Shephard, and others.—The Spectator newspaper (philosophical, whig), begun 5 July, 1828.

SPECTRUM, the term given to the image of the sun or any other luminous body formed on a wall or screen, by a beam of light received through a small hole or slit, and refracted by a prism. The colours thus produced are red, orange, yellow, green, blue, indigo, and violet. The phenomena were first explained by Newton, whose "Optics" was published in 1704. Several of these colours are considered to be compounds of three primary ones: by Mayer (1775), red, yellow, and blue; —by Dr. Thos. Young (1801), red, green, and violet; —by Prof. Clerk Maxwell (1860), red, green, and blue. As the colour of a flame varies according to the substance producing it or introduced into it, so the spectrum varies. This led to the invention of a method of chemical analysis by professors Bunsen and Kirchhoff (1860), by which they discovered two new metals, and drew conclusions as to the nature of the atmosphere of the sun and stars, and of the light of the nebulæ, by comparing the spectrum with that produced by flames into which iron, sodium, and other substances have been introduced. For the invisible rays of the spectrum, see Calorescence, Fluorescence, and Bolometer.

Fraunhofer's Lines. In 1802 Dr. Wollaston observed several dark lines in the solar spectrum; in 1815 Joseph Fraunhofer not only observed them, but constructed a map of them, giving 590 lines or dark bands. By the researches of Brewster and others the number observed is now above 2000.

Mr. Fox Talbot observed the orange line of strontium in 17. FOX PAIDOT OBSERVED THE OFFIGURE HIS OF STRONGUME IN 1826; and sir David Brewster observed other lines, 1833-42-3. In 1862-3 Mr. William Huggins analysed the light of the fixed stars and of the nebule; and in 1865 Dr. Bence Jones, by means of spectrum analyses, detected the presence of minute quantities of nietals in the living body, introduced only a few minutes previously

SPIRITUALISM or SPIRIT-RAPPING. Spiritual manifestations (so called) began, it is said in America about 1848, and attracted attention I this country about 1851, in the shape of rapping table-turning, &c. Many inquisitive or creduit persons visited Mr. Daniel Dunglas Hume or H and Mr. Forster, noted "spiritual mediums." SPURS, BATTLE OF. Henry VIII. of England, the emperor Maximilian, and the Swiss, in 1513, entered into an offensive alliance against France. Henry VIII. landed at Calais in the month of July, and soon formed an army of 30,000 men. He was joined by the emperor with a good corps of horse and some foot, the emperor as a mercenary to the king of England, who allowed him a hundred ducats a day for his table! They invested Terouenne with an army of 50,000 men; and the duc de Longueville, marching to its relief, was signally defeated on the 16th of August, at Guinegate. This battle was called the battle of Spurs, because the French used their spurs more than they did their swords. The English king laid siege to Tournay, which submitted in a few days. *Hénault*. STANDARD for gold and silver in England fixed by law, 1300. Standard gold is 22 parts out of 24 of pure gold, the other two parts or carats being silver or copper. The standard of silver is II oz. 2 dwts. of fine silver alloyed with 18 dwts. of copper, or 37 parts out of 40 pure silver, and three parts copper. In 1300 these 12 oz. of silver were coined into 20 shillings; in 1412 they were coined into 30 shillings; and in 1527 into 45 shillings. In 1545 Henry VIII. coined 6 oz. of silver and 6 oz. of alloy into 48 shillings; and the next year he coined 4 oz. of silver and 8 oz. of alloy into the same sum. Elizabeth, in 1560, restored the old standard in 60 shillings; and in 1601 in 62 shillings. The average proportions of silver to gold at the royal mint are 151 to 1. The standard of plate and silver manufactures was affirmed, 6 Geo. 1. 1719 et seq.; see Gold, Goldsmiths, Silver, Coinage, and Currency.

STANDARD MEASURES. In the reign of Edgar a law was made to prevent frauds arising from the diversity of measures, and for the establishment of a legal standard measure to be used in every part of his dominions. The standard vessels made by order of the king were deposited in the city of Winchester, and hence originated the well-known term of "Winchester measure" of the

STAPLE (literally that which is fixed). The chief English staple commodities which were traded in by privileged merchants, and on which customs were fevied, were wool, skins, leather, tin, lead, nd sometimes cloth, butter, and cheese; certain owns were appointed for the collection of the uties; statutes relating to the staple were passed y Edward III., Richard II., and Henry VI. dward III.'s "ordinacio stapularum" (ordinance f the staple) was enacted in 1353.

STAR-CHAMBER, COURT OF. So called aply from its roof being garnished with stars. Coke. This court of justice was called Star-Chamber, nor rom the stars on its roof (which were obliterated ven before the reign of queen Elizabeth), but from the Starra, or Jewish covenants, deposited there by rder of Richard I. No star was allowed to be alid except found in those repositories, and here hey remained till the banishment of the Jews by Edward I. The court was instituted or revived, Hen. VII. 1486, for trials by a committee of the rivy council, which was in violation of Magna Charta; as it dealt with civil and criminal causes infettered by the rules of law. In Charles I.'s cign it exercised its power upon several bold innovators, who gloried in their sufferings, and consibuted to render government odious and concemptible. It was abolished in 1640. There were n this court from 26 to 42 judges, the lord chancellor having the casting voice. The judicial committee of the privy council is the Star-chamber covived under another name.

It comprised the sovereign, the grand master, 25 mights (Europeans and natives), and extra or concary knights, such as the prince consort, the prince of Wales, &c. The queen invested several enights on I Nov. 1861. The prince of Wales held a grand chapter at Calcutta, I Jan. 1876.

STARS, THE FIXED. They were classed into constellations, it is supposed, about 1200 B.C. Hicetas, of Syracuse, taught that the sun and the stars were notionless, and that the earth moved round them, about 344 B.C. (this is mentioned by Cicero, and rerhaps gave the first hint of this system to Coperticus). Job, Hesiod, and Homer mention several of the constellations. The Royal Library at Parisontains a Chinese chart of the heavens, made about 600 B.C., in which 1460 stars are correctly neerted. The aberration of the stars was discovered by Dr. Bradley, 1727; see Astronomy, and Solar System. Maps of the stars were published by the Society for the Diffusion of Useful Knowledge in 1839, and a set of Celestial Maps, issued under the apperintendence of the Royal Prussian Academy, was completed in 1859.

STATE PAPER OFFICE was founded in 1578, now merged into the Public Record Office. In 1856 the British government began the publication of Calendars of State Papers, invaluable to future historians.

STATES-GENERAL OF FRANCE. An ancient assembly of France, first met, it is said, in 1302 to consider the exactions of the pope. Previous to the Revolution, it had not met since 1614. The states consisted of three orders, the clergy, nobility, and commons. They were convened by Louis XVI., and assembled at Versailles, 5 May, 1789 (308 ecclesiastics, 285 nobles, and 621 deputies or tiers ctat, third estate). A contest arose whether the three orders should make three distinct houses, or but one assembly. The commons insisted upon the latter, and assuming the title of the National Assembly, declared that they were competent to proceed to business, without the concurrence of the two other orders, if they refused to join them. The nobility and clergy found it expedient to concede the point, and they all met in one hall; see National Assembly. Centenary, see France, 5 May, 1889.

STATIONERS. Books and papers were formerly sold only at stalls; hence the dealers were called stationers. The company of attaioners of London is of great antiquity, and existed long before printing was invented, yet it was not incorporated until 3 Philip & Mary, 1557. Their old dwelling was in l'aternoster-row.

STATISTICS, the science of the state, political knowledge, is said to have been founded by sir Wm. Petty, who died in 1687. The term is said to have been invented by professor Achenwall of Göttingen in 1749. The first statistical society in England was formed at Manchester in 1833; the Royal Statistical Society of London, which publishes a quarterly journal, was established 15 March, 1834, for the purpose of procuring, arranging, and publishing "facts calculated to illustrate the condition and prospects of society." Jubilee kept, 22, 23, 24 June, 1885; incorporated, 1887. Similar societies have been established on the continent. International Statistical Institute constituted in 1885, met at Bome, 12-16 April, 1887. International Statistical Congresses are now held occasionally. The 1st at Brussels, chiefly through the agency of M. Quetelet, in 1853; 2nd at Paris, 1855; 3rd at Vienna, 1857; 4th at London, under the presidency of the prince consort, 16-21 July, 1860; 5th at Berlin; 6th at Florence; 7th at the Hague; 8th at St. Petersburg, was opened 22 Aug. 1872; 9th at Pesth, 31 Aug. 1876. The eminent statistical Abstracts have been published annually by the government for many years.

STATUES, see Sculpture, &c. Phidias, who e statue of Jupiter passed for one of the wonders of the world, was the greatest statuary among the ancients, 440 s.c. He had previously made a statue of Minerva at the request of Pericles, which was placed in the Parthenon. It was made of ivory and gold, and measured 39 feet in height. Acilius raised a golden statue to his father, the first that

taking likenesses in plaster moulds, from which he
afterwards cast models in wax, 326 B.C. Michael

During the civil war, the parliament sold it to John River, a brazier, in Holborn, with strict orders to break it to pieces; but he concealed it underground till the Restoration, when it was erected, in 1678, on a pedestal executed by Grinling Gibbons. The first equestrian statue of bronze, founded at one cast, was that of Louis XIV. of France, 1699; it was elevated about 1724.

STEAM CARRIAGE (for ordinary rosk, invented by the earl of Caithness, was said to 2 successful in 1860. It travels over rough resis : the rate of 8 miles an hour, at a cost of less than : per mile. His lordship made a journey of 140 mis in two days; see Road Steamers.

STEAM ENGINE AND NAVIGATION. Hero of Alexandria, in his "Pneumatica," describe various methods of employing steam as a power and to him is ascribed the Æolopile, which, although a toy, possesses the properties of the steam-engine: he flourished about 284-241 B.C. Roger Racea is pears to have foreseen the application of stempower; see Railways, Locomotives, Road Steamers,

Solomon de Caus, a French protestant, publishes a work which Arago on insufficient grounds considers to have contained the germs of the steam-engine. 15:5 The marquis of Worcester describes his steam-engine in his "Century of Inventions" Papin's digester invented

Captain Savery's engine constructed for raising 2681-2 water . He is said to have made a steamboat which was destroyed by boatmen of the Weser. Thomas Newcomen, of Dartmouth, is stated to have constructed "the first self-acting steam-engine;" (used for nearly a century without alteration or

The capital subscribed having been all expended, a new company was formed to fit her for sea.
On 7 Sept. 1859, she left her moorings at Deptford for Portland-roads. On the voyage an explosion took place (off Hastings), through some neglect in regard to the casing of one of the funnels, when ten firemen were killed and many persons seriously injured. After repairs she sailed to Holyhead, arriving there 10 Oct.; she endured the storm of 25-26 Oct. well; and proceeded to Southampton for the winter, 4 Nov.

She was fitted up to convey 5000 persons from London to Australia, a distance of 22,500 miles, with accommodation for 800 1st class passengers, 2000 2nd class, and 1200 3rd class. Her able captain (Harrison) was drowned in the Solent 22 Jan. 1860, deeply regretted. She sailed for New York 17 June, under command of captain Vine Hall, and arrived there 28 June. After heing exhibited she left New York 16 Aug. and returned to England 26 Aug.

Owing to a lawsuit in April, the ship came into the hands of sheriff's officers; but was released and sailed for New

or sherm a ouncers; out was released and sailed for New York on r May, 1861. On 12 Sept, she suffered much loss through a violent gale. In 1862 she performed several voyages to and from New York; but in Aug. ran on a rock near Long Island and injured her bottom.

She was repaired and arrived at Liverpool 17 Jan. 1863,

She was repaired and arrived at Liverpool 17 Jan. 1863, and sailed to New York (16-27 May).

She was bought by Glass, Elliot, and Co. in March or April, 1864, and was chartered to convey the Atlantic telegraph cable; sailed from Sheerness 15 July; and returned 19 Aug. 1865; see under Electric Telegraph.

She sailed for New York, prepared for 2000 passengers, 26 March, and returned with 191. She was seized by the seamen, claiming their wages, May, 1867; and the case was carried into Chancery in July.

was ineffectual In Oct. 1870, Mr. H. Bessemer proposed the application of steam power to artillery.

STEAM HAMMER, invented by Mr. James Nasmyth in 1838, and patented by him 18 June. 1842. Its main feature is the absolutely direct manner by which the elastic power of rteam is employed to lift up and let fall the mass of irea constituting the hammer, which is attached direct to the end of a piston-rod passing through the bottom of an inverted steam cylinder placed immediately over the anvil.

In 1842, Mr. Nasmyth applied his steam-hammer driving piles, which has importantly assisted in the execution of great public works. Owing to its rast range of power, forged iron-work can now by its means be executed on a scale, and for a variety of purposes, with an ease and perfection not previously possible. Parts of gigantic marine steam-engines, anchors, and Armstrong guns, as well as the most minute details of machinery, as in Enfield rifles, are executed by the steam-hammer.

steam-nammer, and to be the then largest in the world, completed at Woolwich: the falling portion weighs 40 tons, and when used with top steam (51 total has the force of 91 tons, April, 1874. One at Schneider's works, Creuzot, France; weight between 75 and 80 tons. Dec. 1877.

STEAM-MAN. A figure constructed to drag phaeton received this name in New York in March, 1868.

STEAM NAVIGATION, see under Steam.

STEAM-PLOUGHS were patented by G. Callaway and R. A. Purkes, 1849; H. Cowing, 1850; and others. John Fowler's of 1854 is much approved.

STEAM-RAM (to be used in naval warfare) was invented by Mr. James Nasmyth in 1836, and communicated to the Admiralty in 1845. Steam-rams built by Mr. James Laird of Birkenhead for the Confederates in N. America, were stopped and eventually bought by the British government, 1864.

STEAM-WHISTLES and STEAM-TRUMPETS, used in factories to summon or dismiss workmen, prohibited by an act passed Aug. 1872.

STEARINE (from stear, suet), that part of oils and fats which is solid at common temperature. The nature of these substances was first made known by Chevreul, in 1823, who showed that they were compounds of peculiar acids, with a base termed glycerine; of these compounds the chief are stearine, margarine, and elaine; see Candles.

STEEL, metal, a compound of iron and carbon, exists in nature, and has been fabricated from the

arliest times. It was certainly used by the Egyptans, Assyrians, and Greeks. It now largely oplaces cast iron in ship building, &c. texaumur discovered the direct process of making steel by immersing malleable iron in a bath of cast iron manufactory for cast steel is said to have been set up by Benjamin Huntsman at Handsworth, mear Sheffield The manufacture of shear steel began in Sheffield. about 1800 German steel was made at Newcastle previously by Mr. Crawley. STEEL PENS. "Iron pens" are mentioned by Chamberlayne in 1685. Steel pens, made long before, began to come into use about 1820, when the first gross of three-alit pens was sold wholesale for 7t. 4s. In 1830 the price was 8s., and in 1832, 6s. A better pen is now sold for 6d. a gross. Birmingham in 1858 produced about 1000 million pens per annum. Women and children are principally employed in the manufacture. Perry, Mitchell, and Gillott are eminent makers. Joseph Gillott, originally a mechanic, made a large fortune by steel-pen making. He died 5 Jan. 1872, aged 72.

STEREOMETER, by which is compassed the art of taking the contents of vessels of liquids by gauging, invented about 1350. Anderson. M. Say's stereometer, for determining the specific gravity of liquids, porous bodies, and powders as well as solids, was described in 1797.

STEREOSCOPE (from stereos, solid, and skopein, to see), an optical instrument for representing in apparent relief natural objects, &c., by uniting into one image two plane representations of these objects as seen by each eye separately. The first stereoscope by reflection was constructed and exhibited by professor Charles Wheatstone in 1838, who had announced its principle in 1833. Since 1854 stereoscopes have been greatly improved.

STEREOTYPE, a cast from a page of movable printing-types, so named by the Parisian printer, Didot, 1798. It is said that stereotyping was known in 1711. It was practised by Wm. Ged of Edinburgh, about 1730. Some of Ged's plates are at the Royal Institution, London. A Mr. James attempted to introduce Ged's process in London, but failed, about 1735.* Vichols. Stereotype printing was in use in Holland, in the last century; and a quarto Bible and a Dutch folio Bible were printed there. Phillips. It was revived in London by there. Phillips. It was revived in London by Wilson in 1804. Since 1850 the durability of stereotypes has been greatly increased by electrotyping them with copper or alver. Stereotyping used for printing the Times, 1856, et seq.

In the library of the Royal Institution is an edition of Sallust, with this imprint: "Edinburg, Gulielmus Ged, auri faber Edinensis, non trypis mobilibus, ut vulgo fieri solet, sed tabellis seu laminis fusis, excudebat. 1744." (Printed at Edinburgh by William Ged of Edinburgh, goldsmith, not with moveable types, as is commonly done, but with cast tablets or plates.)

STERLING (money). Ducange says (1733), "Esterlingus, sterlingus, are English words relating to money, and hence familiar to other nations, and applied to the weight, quality, and kind of money." "Denarius Anglise, qui vocatur sterlingus," stat. Edw. I. (The penny of England, which is called sterling.) Camden derives the word from easterling or esterling, observing that the money brought from Germany, in the reign of Richard I.. was the most esteemed on account of STERLING (money). Ducange says (1733), Richard I., was the most esteemed on account of its purity, being called in old deeds "nummi saster-ling." Others derive the word from the Easterlings, the first moneyers in England.

STETHOSCOPE. In 1816 Laënnec, of Paris, by rolling a quire of paper into a kind of cylinder, and applying one end to the patient's chest and the other to his own ear, perceived the action of the heart in a much more distinct manner than by the immediate application of the ear. This led to his inventing the stethoscope, or "breast-explorer," the principle of which, now termed "auscultation," was known by Hippocrates (357 B.C.), and by Robert Hooke, 1681.

STETTIN (Pomerania), an ancient city, formerly held by the Sidini and Venedes, was taken by Boleslas of Poland in 1121. After being conquered by the Swedes, Russians, and French, it was awarded to Prussia in 1814.

STOVES. The ancients used stoves which concealed the fire, as the German stoves yet do. They lighted the fire also in a large tube in the middle of the room, the roof being open. Apartments were warmed by portable braziers. Stoves on this old principle, improved, continue in use in many houses and public establishments in England, and generally on the continent. Dr. Franklin and count Rumford (who invented a stove) pointed out the waste of fuel in our open fires; and Dr. Neil Arnott patented his "improvements in the production and agency of heat," 14 Nov. 1821. Dr. C. William Siemens described his smokeless stove in "Nature" for 11 Nov. 1880. See Chimneys, and Cottager's Stove.

Till 1823 the body of the suicibe was directed to be buried in a cross-road, and stake to be driven through it. A new act, suppresing the barbarous customs, was passed in 1882. SULPHUR has been known from the earliest times. Basil Valentine mentions its production from green vitriol. Sulphuric acid (vitriol), produced by him from burning sulphur, was introduced into England about 1720. Sulphur has been the object of research of many eminent chemists during the present century, and many discoveries have been made, such as its allotropic condition, &c. It is the inflammable constituent in gunpowder, and a deleterious ingredient in coal gas. The sulphur mines of Sicily have been wrought since the 16th century, but the exportation was inconsiderable till about 1820; in 1838 the trade increased so much that Great Britain alone imported 38,654 tons. In that year the Neapolitan government was induced to grant a monopoly of the trade to a French company; but a firm remonstrance from the British government led to a discontinuance of this impolitic restriction in 1841, which, however, gave a great and lasting impetus to the British sulphur manufacture. In 1871, only 937,049 tons were imported into the United Kingdom.

SWEDENBORGIANS, or New Jerusalem Church, are those who adopt the theological teachings of Emanuel Swedenborg (born at Stockholm, 29 Jan. 1688; died in London, 29 March, 1772). He claimed to have had his spiritual sight opened, and to have been introduced into heaven and hell by the to have been introduced into heaven and the by the Lord that he might disclose their true nature and the science of correspondences by which the internal sense of Scripture, which is the Word as it exists in the heavens, may be known to men: this he did in the Arcana Cœlestia and other works. His disciples first meet as an organized body in London in 1788. in 1788.
There were 70 churches in Great Britain in 1879.
Their belief is that the sole deity is centred in Jesus Christ, in whom is a trinity of essentials; that salvation is effected by faith and works combined; that as man's soul is a spiritual body he will never resume the material body; that the Last Judgment was effected in the spiritual world during Swedenborg's lifetime; and that the Lord's Second Coming has taken place through the revelation of a new system of truth from the inner sense of Scripture The Swedenborg Society instituted, 1810.

SWIMMING. Leander is said to have swum across the Hellespont, between Sestos and Abydos, about one mile; and Lord Byron, and lieut. Ekenhead did the same, 3 May, 1810. On 24 Aug., 1872, Mr. Johnson, styled the "hero of London-bridge," and swimming champion of the world, attempted to swim from Dover to Calais, but was prevented by cold. SWING. Between 1830 and 1833 many haystacks and barns were fired in the rural districts of England, and attributed to an imaginary person named "Swing." Many persons were caught and punished. The probable cause was disputes between the farmers and their deluded labourers.

SWISS GUARDS, Royal, in France, formed in 1616; massacred while defending the Tuileries, 30 Aug. 1792; re-organised Sept. 1815; defeated during the insurrection, 28 July, 1830; dismissed by Charles X. Aug. 1830.

SWITHIN'S DAY, ST., 15 July. St. Swithin lived in the oth century; and, having been the preceptor to king Ethelwulf, was made bishop of Winchester in 852, and died 2 July, 862. The tradition states that it rained forty days in consequence of the proposed removal of his remains from the churchyard to the cathedral.

SWITZERLAND, the ancient Helvetia, was conquered by the Romans, 15 B.C.; and was successively subject to the Burgundians, Germans, and Franks. The canton of Schweitz was peopled by the Cimbrians, who, leaving their original habitation in Scandinavia, invaded Italy, and were defeated by the Roman general Marius; and fled into Helvetia, about 100 B.C. This canton has given name to the whole confederacy.—The present national council is elected every third year, at the rate of one member for 2000 persons. The revised federal constitution was voted 19 April, 1874.— Population, Dec. 1860, 2,507,170; 1870, 2,669,147; 1880, 2,846,102; June 1887, 2,957,527.

TABERNACLE, the Holy Place of the Israelites, till the erection of Solomon's temple, was constructed by Divine direction, 1491 B.C. The tabernacle set up at Shiloh by Joshua, 1444 B.C. was replaced by the temple erected by Solomon, 1004 B.C. The chapel erected for George Whitefield in Moorfields in 1741, being of a temporary nature, received the name of Tabernacle, which was afterwards given to their chapels by the Calvinistic Methodists. Whitefield's Tabernacle in Tottenham-court-road was erected in 1756, and enlarged in 1760. His lease expired in 1828; and the chapel was opened by the Independents in 1830. A large metropolitan tabernacle, erected for the ministrations of Mr. C. H. Spurgeon, a Baptist, near the "Elephant and Castle," Kennington-road, Surrey, was opened on 31 March, 1861.

TABLE TURNING. This delusion, which came from America, and was popular in 1853, was attributed by Faraday and others to involuntary mechanical action. See Spirit-Rapping.

TABOR, in Bohemia, was founded by Ziska in 1420, and became a chief seat of the Hussites; see Hussites.

TAFFETY, an early species of silken manufacture, more prized formerly than now, woven very smooth and glossy. It was worn by our elder queens, and was first made in England by John Tyce, of Shoreditch, London, 41 Eliz. 1598.—Stow's Chron.

TAGLIACOZZO, in the Abruzzi mountains, S. Italy, where, on 23 Aug. 1268, Charles of Anjou, the usurping king of Naples, defeated and made prisoner the rightful monarch, young Conradin (the last of the Hohenstaufens, and grandson of the emperor Frederick II.), who had been invited into Italy by the Ghibelline or Imperial party; their opponents, the Guelfs, or papal party, supporting Charles. Conradin was beheaded, 29 Oct. following.

TALAVERA DE LA REYNA (central Spain), was taken from the Mahometans by Ordoño, king of Leon, 913. Here a battle was fought 27, 28 July, 1809, between the united British and Spanish armics under sir Arthur Wellesley, and the French

army commanded by marshals Victor and Sebsstiani. After a conflict on the 27th, both armies remained on the field during the night, and the French at break of day renewed the attack, and were again repulsed by the British with great slaughter. At noon Victor charged the whole British line, was repulsed at all points, and retreated with a heavy loss. As Soult, Ney, and Mortier were in the rear, the British retired after the victory.

TALKING-MACHINE, see Automatons.

TALLY OFFICE in the Exchequer took its name from the French word tailler, to cut. A tally is a piece of wood written upon both sides, containing an acquittance for money received; which, being cloven asunder by an officer of the exchequer. one part, called the stock, was delivered to the person who paid, or lent, money to the government and the other part, called the counter-stock, or counter-foil, remained in the office, to be kept till called for, and joined with the stock. This manner of striking tallies is very ancient.—Beatson. The practice was ordered to be discontinued in 1782. See Exchequer. On 16 Oct. 1834, the houses of parliament were burnt down by too many of these tallies being used in heating the stoves in the house of lords.

TALMUD (from lamad, to teach), the compendium of ancient Jewish oral or unwritten law, as distinguished from the Pentateuch, or written law; its origin is coeval with the return from the Babylonish captivity, 536 B.C. Its compilation in Hebrew was begun by the Scribes, and by their successors the work was carried on till 220 B.C. It is composed in prose and poetry, and contains two elements, legal and legendary. The morality resembles that of the New Testament, and the philosophy is rather Platonic than Aristotelian.

The Mischna, comprising the work of the rabhia, termed Thanaim, was compiled by Jehuda Hanassi, in the middle of the second century, a.D., and forms the Jerusalem Talmud, written at Tiberias, in Palestine, about 230. The Babylonian Talmud contains also the Gemera or Ghemara, the work of the rabbis termed Amoraim, criticisms and comments on the Mischna The part named Halacha, is dogmatic, legal, and doctrinal; the Agaba, is illustrative, narrative, and legendary.

doctrinal; the Agaba, is illustrative, narrative, and legendary.

After being almost universally condemned, and the MSS often burnt, the defence of the Talmud was undertakes by the German reformer Reuchlin, in the 16th century, and between 1520 and 1523, the "Talmud Babylonicum," in 2 vols. fol., and the "Talmud Hierosolytanum," in 10 vol. fol., were printed at Venice. A discourse on the Talmud was given at the Royal Institution, 15 May, 1868, by Mr. Emanuel Deutsch, whose article in the "Quarterly Review," Oct. 1867, had attracted much attention.

Vol. I. of the first English translation of the Jerusalera Talmud by Dr. Moise Schwab, appeared in 1885; be had published part of a French translation.

TANCRED'S CHARITIES. Valuable exhibitions for students at Cambridge are maintained by Christopher Tancred's endowment, 1721; established by chancery, 1757.

TANDY ARREST. James Napper Tandy proposed a plan of reform in 1791. In the French expedition against Ireland he acted as a general, Aug. 1798. After its failure he fled to Hamburg, and was there delivered up to the English, 24 Nov.; for which Bonaparte declared war upon Hamburg, 15 Oct. 1799. Tandy was liberated after the peace of Amiens in 1802.

TANGIER (Morocco, N. W. Africa), besieged by prince Ferdinand of Portugal, who was beaten and taken prisoner, 1437. It was conquered by Alfonso V. of Portugal in 1471, and given as a dower to princess Catherine, on her marriage with Charles II. of England, 1662; who, in 1683, caused the works to be blown up, and the place abandoned. Tangiers afterwards became a piratical station.

TANISTRY (in Ireland), the equal division of lands, after the decease of the owner, amongst his sons, legitimate or illegitimate. If one of the sons died, his son did not inherit, but a new division was made by the tanist or chief. Abolished 1604. Davies.

TANJORE (W. India). About 1678, Vencajee, a Mahratta chief, brother of the great Sevajee, made himself rajah. In 1749 a British expedition endeavoured to restore a deposed rajah without success; the reigning prince bought them off by the cossion of territories. Much intervention ensued. In 1799 the company obtained possession of the country, engaging to support the rajah with nominal authority. The last is said to have died in 1855.

TANNENBERG (E. Prussia). Here Ladislaus V. Jugellon of Poland defeated the Teutonic knights with great slaughter, the grand master being among the slain, 15 July, 1410. The order never recovered from this calamity.

TANNING leather with the bark of trees was early practised. Tan was introduced into Great Britain from Holland by William III. for raising orange trees about 1689. It was discontinued until about 1719, when bananas were first brought into England. Great improvements have been recently made in tanning by means of chemical knowledge.

TANTALUM, a rare metal, discovered in an American mineral by Hatchett, in 1801, and named by him columbium; and in a Swedish mineral by Ekeberg, who gave it its present name. Wollaston pointed out the identity of the two metals in 1809; and Berzelius prepared pure metallic tantalum in 1822. In 1846 Rose discovered that tantalum was really a mixture of three metals, which he named tantalum, niobium, and pelopium.—Gmelin.

TANZIMAT, see Turkey, 1839-44.

TAPESTRY. An art of weaving borrowed from the Saracens, and hence its original workers in France were called Sarazinois. The invention of tapestry hangings belongs [the date is not mentioned] to the Netherlands.—Guicciardini. Manufactured in France under Henry IV. by artists invited from Flanders, 1606. The art was brought into England by William Sheldon; and the first manufactory of it was established at Mortlake by sir Francis Crane, 17 James I. 1619.—Salmon.

Under Louis XIV. the art of tapestry was much improved in France; see Gobelin Tapestry. Very early instances of making tapestry are mentioned by the ancient poets, and also in Scripture; so that the Saracens' manufacture is a revival of the art. For the tapestry said to have been wrought by Matilda, queen of England, see Bayeux Tapestry.

Tapestry manufactory established at Windsor by Mr. H. Henry, supported by the royal family, and others; exhibition opened in the town-hall, 6 December, 1878. Manufacture revived by Messrs. Trollope of London,

TAPIR, the American water-hog, a pachydermatous animal. The first born in England at Zoological Gardens, London, 12 Feb. 1882.

TAR. The chemist Becher first proposed to make tar from pit-coal—the earl of Dundonald's patent, 1781. The mineral tar was discovered at Coalbrook-dale, Shropshire, 1779; and in Scotland, Oct. 1792. Tar-water was first recommended for its medicinal virtues by the good Dr. Berkeley, bishop of Cloyne, about 1744. From benzole, discovered in coal-tar, many brilliant dyes are now produced; see Anitine.

TARA, a hill in Meath, Ireland, where the early kings of Ireland were inaugurated. Near here, on 26 May, 1798, the royalist troops, 400 strong, defeated the insurgent Irish (4000 men), 500 killed. On 15 Aug. 1843, Daniel O'Connell held a monster meeting here (250,000 persons said to have been assembled).

TARBES (S. France, near the Pyrenees), capital of Bigorre, the property of the English kings in the middle ages. The French, under Soult, were forced from their position at Turbes, with considerable loss, by the British army commanded by Wellington, 20 March, 1814. See Toulouse.

TARENTUM (now Taranto, S. Italy), was founded by the Greek Phalantus, B.C. 708. The people of Tarentum assisted by Pyrrhus, king of Epirus, supported a war which had been undertaken a.c. 281 by the Romans, to avenge the insults the Tarentines had offered to their ships when near their harbours; it was terminated after ten years; 300,000 prisoners were taken, and Tarentum became subject to Rome. Except the citadel, Tarentum was captured by the Carthaginians, 212, but recovered by Fabius, 200 B.C. Tarentum has shared in the revolutions of Southern Italy, and only ruins remain.

TARGUMS or EXPLANATIONS, names given to certain ancient Chaldee paraphrases of the Old Testament. The most remarkable are those of Onkelos, Jonathan-ben-Uzziel, and Joseph the Blind. The Targum of Onkelos is referred by some writers to the first century A.D.

TARIFA (S. Spain), the ancient Joza and Julia Traducta, where Muza landed when invading Spain, 712. It was taken from the Moors by Sancho IV. of Castile, 1291 or 1292; and was relieved, when besieged by them, after a great victory over the kings of Morocco and Granada, by Alfonso XI. of Castile and Alfonso IV. of Portugal, 28 or 30 Oct. 1340. The conflict is called the battle of Salado, having been fought on the banks of that river. Tarifa was taken by the French in 1823.

TARIFF (said to have been derived from Tarifa, where duties were formerly collected), a book of duties charged on goods exported or imported. Our tariff in 1840 comprised 1042 articles; the number was reduced (by sir Robert Peel) in 1845 and 1847. It comprised 439 articles in 1857; this number was greatly reduced in 1860.

TARPEIAN ROCK (Rome), owed its name to the tradition that Tarpeia, daughter of the keeper of the Roman citadel, was here crushed to death by the shields cast on her by the Sabines, whom she treacherously admitted, having bargained for the gift of what they wore on their left arms, meaning their bracelets; about 750 B.C.

TARRAGONA (N.E. Spain), occupied as a naval station by the British before their capture of Gibraltar in 1704. It was stormed and sacked by the French under Suchet, 29 Jan. 1811, and the inhabitants put to the sword.

TARTAN or HIGHLAND PLAID, the dress of the Scottish Highlanders, said to have been derived from the ancient Gauls, or Celtæ, the Galli non braccati.

TARTARIC ACID is said to have been the first discovery of the eminent chemist, Scheele, who procured it in a separate state by boiling tar with lime, and in decomposing the tartrate of lime thus formed by means of sulphuric acid, about 1770. In 1859 baron Liebig formed tartaric acid from other sources.

TARTARY (Asia). The Tatars, or Tartars, or Mongols, or Moguls, were known in antiquity as Scythians. During the decline of the Roman empire, these tribes began to seek more fertile regions; and the first who reached the frontier of Italy were the Huns, the ancestors of the modern Mongols. The first acknowledged sovereign of this vast country was the famous Genghis Khan. His empire, by the conquest of China, Persia, and all central Asia (1206-27), became one of the most formidable ever established; but it was split into parts in a few reigns. Timur, or Tamerlane, again conquered Persia, broke the power of the Turks in Asia Minor (1370-1400), and founded the Mogul dynasty in India, which began with Baber in 1525, and formed the most splendid court in Asia till the close of the 18th century; see Golden Horde. The Calmucks, a branch of the Tartars, expelled from China, settled on the banks of the Volga in 1672, but returned in 1771, and thousands perished on the journey.

TASIMETER, see Micro-tasimeter.

TASMANIA, the name now given to the British settlement in Van Diemen's Land (which see).

TATTERSALL'S, see Races.

TAUNTON (Somerset), was taken by Perkin Warbeck, Sept. 1497; and here he was surrendered to Henry VII. 5 Uct. following. The duke of Monmouth was proclaimed king at Taunton, 20 June, 1685; and it was the scene of the "bloody assize" held by Jeffreys upon the rebels in August.

TAVERNS may be traced to the 13th century. "In the raigne of king Edward the Third, only three taverns were allowed in London: one in Chepe, one in Walbrok, and the other in Lombard-street."—Spelman. The Boar's Head, in East-cheap, existed in the reign of Henry IV., and was the rendezvous of prince Henry and his dissolute companions. Shakspeare mentions it as the residence of Mrs. Quickly, and the scene of Falstaff's merriment.—Shakspeare, "Henry IV." The White Hart, Bishopsgate, established in 1480, was rebuilt in 1829. Taverns were licensed in 1752.

Taverns were restricted by 7 Edward VI. 1552-3, to 40 in London, 3 in York, 4 in Norwich, 3 in Westminster, 6 in Bristol, 3 in Lincoln, 4 in Hull, 3 in Shrewsbury, 4 in Exeter, 3 in Salisbury, 4 in Gloucester, 4 in Chester, 3 in Hereford, 3 in Worcester, 3 in Southampton, 4 in Canterbury, 3 in Ipswich, 3 in Winchester, 3 in Oxford,

TAXES were levied by Solon, the first Athenian legislator, 540 B.C. The first class of citizens paid an Attic talent of silver, about 55L of our money. Darius, the son of Hystaspes, levied a land-tax by assessment, which was deemed so odious that his subjects styled him, by way of derision, Darius the Trader, 480 B.C.—D'Eon. Taxes in specie were first introduced into England by William I., 1007. and he raised them arbitrarily; yet subsidies in kind, as in wool, leather, and other products of the country, continued till the accession of Richard II. 1377.—Canden; see Revenue and Income Test. "TAXES ON KNOWLEDGE" (see Advertisement Duty, Newspaper Stamp, and Paper Duty). For he exertions in repealing these, a testimonial was presented to Mr. T. Milner Gibson in 1861. The assessed taxes now include land tax, house duty, and property and income tax. The Taxes Management Act, 43 & 44 Vict. c. 19, passed 6 Aug. 1880 (see below). Mr. Stephen Dowell's "History of Taxition and Taxes in England," published in 1851.

TELEGRAPHS (from the Greek, tele, afar, and grapho, I write). Eschylus, in his Agamemnon (B.C. 500), describes the communication of intelligence by burning torches as signals. Polybius, the Greek historian (who died about 122 B.C.), calls the different instruments used by the ancients for communicating information, pyrsia, because the signals were always made by fire. In 1663, a plan was suggested by the marquis of Worcester, and a was suggested by Dr. Hooke, 1684. M. Amontons is also said to have been the inventor of telegraphs about this period. James II., while duke of York, originated a set of navy signals, which were systematised by Kempenfeldt in 1780; and a dictionary was compiled by sir Home Popham. M. Chappe then invented the telegraph first used by the French in 1792, and two were erected over the Admiralty-office, London, 1796. The sema-phore was erected there 1816. The naval signals by telegraph enabled 400 previously concerted sentences to be transmitted from ship to ship, by varying the combinations of two revolving crosses. Baron Reuter's telegraph agency founded at Aix la Chapelle, 1851. Acts relating to telegraphs were passed in 1863 and 1866. The telegraph act, passed 31 July, 1868, enabled the postmaster-general to or stay, roots, enabled the post-inster general to purchase existing electric telegraphs (not less than is, for a telegram, 20 words). Mr. Scudamore was appointed director, Jan. 1872. The principle of a 6d. telegram adopted by the Commons, 29 March, 1883, and enacted to come into operation 1 Oct. 1883; deferred; bill introduced by Mr. Shaw-Lefevre 30 March; act passed 14 Aug.; came into operation 1 Oct. 1885. Great destruction of telegraph posts and wires by gale and snowstorm; London streets blocked by fallen wires 26-27 Dec. 1886. The Society of Telegraph Engineers founded 1871; held first general meeting, 28 Feb. 1872, Chas. Wm. Siemens, president; incorporated 1883. Present title "Institution of Electrical Engineers" (1889). See Electric Telegraph, under Electricity, and Telegraphs, under Post Office, 1869, et seq. The Telegraphic Journal began 15 Nov. 1873.

TELEKOUPHONON, or speaking telegraph, consisted of piping of gutta percha, caoutchouc, glass, or earthenware, with a terminal mouthpiece of ivory, bone, wood, or metal. It was used for dockyards and large establishments. was described by Mr. Francis Whishaw at the meeting of the British Association at Swansea, August, 1848.

TEL-EL-KEBIR, Egypt, the site of the entrenched camp of the rebel general, Arabi Pasha, his force being about 17,500 regular infantry, 2,500 cavalry, 6000 Bedouins and other irregulars, and 70 guns; captured by the British 13 Sept. 1882.

Sir Garnet Wolseley broke up his camp at Ismailia on the night of 12 Sept. and began his advance at 1.30 a.m., his force being about 11,000 infantry, 2000 cavalry, and 40 guns; the troops marched rapidly in the dark, each regiment endeavouring to be first. At daybreak they arrived at the camp. The surprised Egyptians filled the transplant and careful will index each trails. the trenches and fought well under cover; but when the British scaled the parapets, they at first resisted bravely, but afterwards fied, being hotly pursued by the British cavalry, leaving all their guns, ammuni-nition, &c. in the hands of the victors. Thousands nition, &c. in the hands of the victors. Thousands were killed or made prisoners. Arabi Pasha fied towards Cairo. Among our killed were majors Colville, Underwood, and Somervell, and lieut. McNeill. The British general's masterly plans of the campaign were thus successfully carried out by his efficient staff and gallant army, which included many young soldiers. The Irish and Highland regiments and the Guards being specially distinguished. Arabi Pasha's army was completely broken up, and the British entered Cairo the next day, 14 Sept. British killed about 52, and 380 wounded; Egyptian killed and wounded about 1500. The Highlanders bore the brunt of the action.

TELEMETER, &c., an instrument for determining the distance between a gun and the object fired at. Lieut. von Ehrenberg and major Mentaudon, in Baden, constructed a telemeter the size of a watch, by which the distance is determined an shown on a dial by the action of sound, 1878-85. Teletopometer, another apparatus for ascertain. the distance from point to point, invented by lr. Luigi Cerebotani, was announced in Sept. 1855. two telescopes are employed.

Their wealth having ex-cited the cupidity of the French kings, the order was suppressed by the council of Vienne, and part of its revenues was bestowed upon other orders about 1312. THELLUSSON'S WILL, a most singular document. Mr. l'eter Isaac Thellusson, a Genevese and an affluent merchant of London, left 100,000% to his widow and children; and the remainder of his property, more than 600,000/., he left to trustees, to accumulate during the lives of his three sons, and the lives of their sons; then the estates, directed to be purchased with the produce of the accumulated fund, were to be conveyed to the eldest lineal male descendant of his three sons, with the benefit of survivorship. Should no heir then exist, the whole was to be applied, by the agency of the sinking fund, to the discharge of the national debt. It is said that Mr. Thellusson held much property in trust, and that he desired a sufficient interval of time to elapse for the appearance of just claimants. He died 21 July, 1797. His will incurred much public censure, and was contested by the heirs-at-law, but finally established by a decision of the house of lords, 25 June, 1805. The last surviving grandson died in Feb. 1856. A dispute then arose whether the eldest male descendant or the male descendant of the eldest son should inherit the property. The question was decided on appeal by the house of lords (9 June, 18(9), in favour of the latter, lord Rendlesham and Charles S. Thellusson confirming the decision of the Master of the Rolls in 1858. In consequence of the legal expenses the property is said not to exceed greatly its value in the testator's lifetime. On 28 July, 1800, the Thellusson act was passed, re-straining testators from devising their property for purposes of accumulation for longer than 21 years after death; any other direction to be void.

In 1542, James died, and the order was discontinued, about the time of the Reformation. The order was renewed by James VII. of Scotland and II. of England, by making eight knights, 29 May, 1687; increased to twelve by queen Anne in 1703; to sixteen by George IV. in 1827. TORBANEHILL MINERAL. Mr. Gilespie, of Torbanehill, granted a lease of all the coal in the estate to Messrs. Russell. In the course of working, the lessees extracted a combustibe mineral of considerable value as a source of coagas, and realised a large profit in the sale of it agas-coal. The lessor then denied that the mineral was coal, and disputed the right of the lessees to work it. At the trial in 1853 there was a great array of scientific men and practical gas engineers, and the evidence was most conflicting. One side maintained the mineral to be coal, the other that it was a bituminous schist. The judge set aside the scientific evidence, and the jury pronounced it to be coal. The authorities in Prussia have since pronounced it not to be coal. Percy.

After a protracted fight, Villeneuve and the ships captured, sunk, or destroyed. Nelson was killed, and admiral Collingwood succeeded to the command. TRAM-ROADS: as Mr. Benjamin Outram, father of sir James, the Indian general, in 1800, made improvements in the system of railways for common vehicles in the north of England, the name is ascribed to him, but it is said to have existed in Derbyshire before, a coal waggon having been called a tram. The iron tram-road from Croydon to Wandsworth was completed on 24 July, 1301. Street railways or tramways for omnibuses drawn by horses, previously established by Mr. Train in New York, were opened by him at Birkenhead, Cheshire, 30 Aug. 1860, and at Bayswater, London, 23 March, 1861. (See Ireland, 1868.) A street railway bill was rejected by the house of commons in April, 1861. Several of these railways existed for a time in various parts of the metropolis in 1861, but were all taken up in 1862. An act to facilitate the construction of tramways passed 9 Aug. 1870. Tramways from Brixton to Kennington, and from White-chapel to Bow, were opened 9 May, 1870; and others since. Their introduction into the city was much recommended but opposed, March-May, 1873. TRANSUBSTANTIATION, the doctrine of the "real presence." That the bread and wine in the Eucharist are changed into the very flesh and blood of Christ by the consecration, was broached in the days of Gregory III. (731), and accepted by Amalarius and Radbertus (about 830), but rejected by Rabanus Maurus, Johannes Scotus Erigena, Berengarius, Wicliffe, and others. In the Lateran council, held at Rome by Innocent III., the worl "Transubstantiation" was used to express this doctrine, which was decreed to be incontrovertible: and all who opposed it were condemned as heretics.

John Huss, Jerome of Prague, and other nartyrs of the reformation, suffered for denying his dogma, which is renounced by the church of England (28th article), and by all protestant dis-senters. The declaration against transubstantia-ion, invocation of the saints, and the sacrifice of he mass, on taking any civil office, was abolished by an act passed 25 July, 1867; see Sacrament. Luther maintained the doctrine of con-substantiation, viz., that after consecration the body and blood of Christ are substantially present in the bread and wine. He was opposed by Bucer, Carlstadt, Zwingle, and others (termed sacramentarians), who asserted that the Lord's supper is only a commemorative rite. TRAPPISTS. The first abbey of La Trappe in Normandy was founded, in 1140, by Rotrou, comte de Perche. The present order of Trappists owes its origin to the learned Jean le Bouthillier de la Rancé (editor of Anacreon when aged 14), who renounced the world, and sold all his property, giving the proceeds to the abbey of La Trappe, to which he retired in 1662, to live there in great austerity. After several efforts he succeeded in rule, which commands silence, prayer, reading, and manual labour, and which forbids study, wine, fish, &c. Rancé was born in 1620, and died in 1700. The Trappists' new building was consecrated in Aug. 1833.

A number of these monks, driven from France in the revolution of 1790, were received by Mr. Weld, of Lul-worth, Dorsetshire, who gave them some land to cultiworth, Dorsetshire, who gave them some land to custivate and a habitation, where they remained till 1815. This order was charged with rebellion and conspiracy in France, and sixty-four English and Irish Trappists were shipped by the French government at Paimboud, 19 Nov., and were landed from the Hebt, French frigate, at Cork, 30 Nov. 1831. They established themselves at Mount Melleray, county of Waterford.

TREBIA, now Trebbia, a river in North Italy, near which Hannibal defeated the Boman consul Sempronius, 218 B.C.: and Suverrow, after a struggle, defeated the French marshal Macdonald and compelled him to retreat, 17-19 June, 1799.

TREBIZOND, a port of Asia Minor in the Black Sea, was colonised by the Greeks, and became subject to the kings of Pontus. It enjoyed self-government under the Roman empire, and when the Latins took Constantinople in 1204, it became the seat of an empire which endured till 1461, when it was conquered by the Turks under Mahomet I.

TREES in London. Many were planted by John Evelyn in the Mall, St. James's, &c. He recommended this in his "Fumifugium," published 1661. The planting of rows of trees in suburban roads began in 1875.

TREES OF LIBERTY were planted in Paris and other parts of France during the revolutionary eras, 1790 and 1848. These trees were cut down in Paris in Jan. 1850, when riots ensued, put down by the military. The celebrated tree Février, planted in 1780 near the National Library, Paris, was felled early in 1884.

TRENT (the ancient Tridentum), in the Tyrol, belongs to Austria. The council held here is reckoned in the Roman catholic church as the 18th general council. Its decisions have been implicitly received as the standard of faith, morals, and discipline in that church. It first sat 13 Dec. 1545, and continued (with interruptions) under pope Paul III., Julius III., and Pius IV. to 4 Dec. 1563; its last sitting (the 25th). A jubilee in relation to this council was celebrated in June, 1863. Trent was several times taken during the French war.

At this council was decreed, with anathemas: the canon of scripture (including the apocrypha), and the church its sole interpreter; the traditions to be equal with scripture; the seven sacraments (baptism, confirmation, the Lord's supper, penance, extreme unction, orders, and matrinony); transubstantiation; purgatory; indulgences; celibacy of the clergy; auricular confession, &c.

TRENT STEAMER, see United States, Nov.-Dec. 1861.

# TREVECCA, see Cheshunt.

TRÈVES, or TRIER, the Roman Treviri, in Rhenish Prussia, was a prosperous city of the Gauls 12 B.C. The emperor Gallienus held his court here A.D. 255. The church of St. Simeon dates from the 4th century. Trèves was made an electorate in the 14th century, and became subject to the archbishop in 1585. Councils held here, 285-1423. The archbishopric is said to have been founded before the other than the century and to be the oldest in Germany. After various changes, Trèves was acquired by Prussia, June 1815. In 1844 much excitement was occasioned by miracles said to have been wrought by a "Holy Coat."

"TRIA JUNCTA IN UNO" (three joined in one), the motto of the knights of the military order of the Bath, signifying "faith, hope, and charity;" see Bath.

TRIAL AT BAR, signifies by the whole court or a plurality of judges. This plan was adopted at Bristol after the riots in 1832; also at O'Connellitrial, 1844; and arranged for the trial of the claimant of the Tichborne estates for perjury, in April, 1873. See Juries.

TRIALS. Regulations for conducting tridwere made by Lothaire and Edric, kings of Kert. about 673 to 680. Alfred the Great is said to have begun trial by jury; but there is good evidence were such trials before his time. Arrangements were made for more speedy trials by "the Winter Assizes Act," 1876. See Appeal.

TURIN, the ancient Augusta Taurinorum in Piedmont, capital of the Sardinian States, and of the kingdom of Italy, till 1864, when it was super-seded by Florence. Its importance dates from the permanent union of Savoy and Piedmont in 1416. The French besieged this city; but prince Eugène defeated their army, and compelled them to raise the siege, 7 Sept. 1706. In 1798, the French republican army took possession of Turin, seized all the strong places and arsenals of Piedmont, and obliged the king and his family to remove to the island of Sardinia. In 1799, the French were driven out by the Austrians and Russians; but the city and all Piedmont surrendered to the French, June 1800. In May 1814, it was restored to the king of Sardinia; see Italy, 1864. Here prince Humbert was married to his cousin Margherita amidst great rejoicing, 22 April, 1868. The monument to Cavour was inaugurated, 8 Nov. 1873. An exhibition opened by the king, 25 April, 1880. See Treaties, and Italy, 1884.

The rule of the czar accepted by the chief tribes at Merv, (which see), announced 8 Feb. 1884.

TURKEY. The Turks were originally a tribe of Tartars; but, by incorporation with the peoples they have conquered, have become a mixed race. About 760, they obtained possession of a part of Armenia, called from them Turcomania. They gradually extended their power; but in the 13th century, being harassed by other Tartar tribes, they returned to Asia Minor. The Turkish empire till 1878 comprehended the almost independent principalities of Moldavia and Wallachia, Servia, and Montenegro, the hereditary vice-royalty of Egypt, and Tunis. The Turkish quadrilateral forresses were Shumla, Varna, Silistria, and Rustchuck. The population of the empire was estimated in 1887 at 32,978,100. (Immediate Possessions, 21,633,000,tributaries and protectorates, 11,345,100); in Europe, 8,987,000; Asia, 16,174,100; Africa, 7,817,000. TURNER'S ACT, 13 & 14 Vict. c. 35 (1850), relates to the court of chancery.

TURNER'S LEGACIES. Joseph M. W. Turner, a great landscape painter, was born in April, 1775, and died 19 Dec. 1851. He bequeathed to the nation all the pictures and drawings collected by him and deposited at his residence, 47, Queen Annestreet, London, on condition that a suitable gallery should be erected for them within ten years; and directed his funded property to be expended in founding an asylum at Twickenham for decayed artists. The will was disputed by his relatives, but a compromise was made. The oil-paintings (100 in number) and the drawings (1400) were obtained by the nation, and the engravings and some other property were transferred to the next of kin. The drawings were cleaned and mounted under the careful superintendence of Mr. Ruskin, and the pictures were sent to Marlborough-house for exhibition. In 1861, many of the pictures were removed from the South Kensington Museum to the National Gallery, others in 1869. The sketches, plates, &c., of Turner's Liber Studiorum, were sold for about 20,000l. 28 March, 1873.

Solon objected to the term, and chose the name Archon (ruler), 594 B.C. The earliest tyrants were those at Sieyon, beginning with Cleisthenes, in the 7th century B.C. Tyranny declined in Greece about 490 B.C., and revived after the close of the Peloponnesian war, 404 B.C.; see Thirty Tyrants.

TYRE (Phomicia), a great city, said to have been first built by Agenor. Another city was built 1257 (about 2267, Hales) B.C. It was beaieged by the Assyrians, who retired from before it, after a siege of upwards of five years, 713 B.C. Taken by Nebuchadnezzar, 572 B.C., and the city demolished, when the Tyrians removed to an opposite island, and built a new and magnificent city. It was taken by Alexander with much difficulty, after a siege of seven months, July, 332 B.C. He joined the island to the continent by a mole. Strabo. Tyre was captured by the Crusaders, 7 July, 1124; by the French, 3 April, 1799; and by the allied fleet, during the war against Mehemet Ali, 1841.

TYRE, ERA OF, began on 19 Oct. 125 B.C., with the month of Hyperberetzeus. The months were the same as those used in the Grecian era, and the year is similar to the Julian year. To reduce this era to ours, subtract 124; and if the Minor.

given year be less than 125, deduct it from 125, and the remainder will be the year before Christ.

TYROL, the eastern part of ancient Rhsu, now a province of the Austrian empire, was celeb the house of Hapsburg in 1359 by Margaret, the heiress of the last count. It became an appeare of the younger (or Tyrol) branch of the imperal house, which came to the throne in the person of Maximilian II., in 1618. The French conquest the Tyrol in 1805, and united it to Bavaria; but in 1809 an insurrection broke out, headed by Andre Hofer, an innkeeper, who drove the Bavarians out of the Tyrol, thoroughly defeated some French stachments, but laid down his arms at the treaty of Vienna. He was subsequently accused of corresponding with the Austrians, captured and sent in Mantua, and there shot by order of the French government, 20 Feb. 1810. The Austrian empewennobled his family in 1819, and erected his stare in Innsbruck in 1834. The Tyrolese rifeman were very effective in the Italian war in 1859. UNIFORMITY ACTS. That of 2 & 3 Edward VI., 15 Jan. 1549, ordained that the order of divine worship, drawn up by Cranmer and others, "with the aid of the Holy Ghost," should be the only one used after 20 May. The penalties for refusing to use it were fine and imprisonment. This act was confirmed in 1552; repealed by Mary, 1554; and re-enacted by Elizabeth in 1559. The act of Uniformity, 14 Charles II. c. 4, was passed in 1662. It enjoined uniformity in matters of religion, and obliged all clergy to subscribe to the thirty-nine articles, and use the same form of worship, and same book of common prayer. Its enforcement on 24 Aug. 1662, termed Black Bartholomew's day, caused, it is said, upwards of 2000 ministers to quit the church of England. This day was commemo-rated by dissenters in 1862. The Act of Uniformity Amendment act whereby shortened services were Amendment act, whereby shortened services were authorised, and other changes made, was passed 18 July, 1872. The Uniformity of Process act, which made many law changes, was passed 23 May, 1832.

UNION JACK. The original flag of England was the banner of St. George, i.e., white with a red cross, which, 12 April, 1606 (three years after James I. ascended the throne) was incorporated with the banner of Scotland, i.e., blue with a white diagonal cross. This combination obtained the name of "Union Jack," in allusion to the union with Scotland, and the word Jack is considered a corruption of the word Jacobus, Jacques, or James. This arrangement continued until the union with Ireland, I Jan. 1801, when the banner of St. Patrick, i.e., white with a diagonal red cross, was amalga-mated with it, and forms the present Union flag.

Servetus, refusing to re-ract his opinions, was condemned to the flames, which sentence was carried into execution, 27 May, 1553. Matthew Hamont was burnt at Norwich for asserting Christ not to be the Son of God, I June, 1579. The Unitarians were nume-rous in Transylvania in the 17th century; they came to England about 1700, and many of the original English presbyterian churches became Unitarians about 1730. UNIVERSALISTS, who believe in the final salvation of all men. This doctrine, declared in the Talmud, and ascribed to Origen, about 230, was advocated by other early fathers, but opposed by St. Augustin, about 420; and condemned by the 5th general council at Constantinople, May, June, 553. It was received by the Unitarians in the 17th century, and avowed by numerous clergymen of the church of England. James Relly, who published his "Union" in 1760, founded the sect of Universalists in Britain; and John Murray, in America, about 1770. The sect barely exists in Britain, but flourishes in America.

UNIVERSAL REVIEW, edited by Mr. Harry Quilter, devoted to fine art, literature, &c., first published 15 May, 1888.

UNIVERSAL SUFFRAGE (Plebiacitum), one of the six points of the charter (see Chartists), was adopted by the French in their constitution of 1791; and used in the election of their president in 1851, and of their emperor in 1852; and by the Italian States in voting for annexation to Sardinia in 1860, 1861, 1866, and 1870.

### UNIVERSAL TIME, see under Day.

Admiral Keppel commanded the English fleet; the count d'Orvilliers the French. VELOCIPEDES. A machine of this kind was invented by Blanchard the aëronaut, and described in the Journal de Paris, 27 July, 1779; and one was invented by Nicéphore Niepce in 1818. The "dandy horse" or "Draisena, a machine called a velocipede," was patented for the Baron von Drais, in Paris and London in 1818, and described in "Ackermann's Repository," Feb. 1819. These machines came again into use in 1861; and since 1867 have been very common under various forms, termed bicycles and tricycles; the chief inventor of which, James Starley, an ingenious mechanic of Albourne, Sussex, was buried at Coventry, June, 1881. The popular "Otto" bicycle, first patented in 1881, much improved since. Velocipede races took place at the Crystal Palace, 26 May, 1869, and frequently since. Mr. John Mayall and two friends travelled to Brighton on velocipedes, 17 Feb. 1869.

VENEZUELA, the seat of a South American republic. When the Spaniards landed here in 1495, they observed some huts built upon piles, in an Indian village named Cors, in order to raise them above the stagnated water that covered the plain; and this induced them to give it the name of Venzuela, or Little Venice. VENUS, the Roman goddess of love and beauty (the Greek Aphrodité). The transit of the planet Venus over the sun was predicted by Kepler, but not observed. The first transit observed, was by the rev. Jeremish Horrox, or Horrocks, and his friend, Wm. Crabtree, on 24 Nov. 1639, as predicted by Horrox in 1633. The astronomer-royal Maskelyne observed her transit at St. Helena, 6 June, 1761. Capt. Cook made his first voyage in the Endeacour, to Otaheite, to observe a transit of Venus, 3 June, 1769; see Cook's Voyages. The diurnal rotation of Venus was discovered by Cassini in 1667. See Sun, note. Statues: Venus de Medicis, found near Tivoli and removed to France, 1680; the Venus found at Milo or Melos, 1820, placed in the Louvre, Paris, 1834.
Halley suggested the observation of the transit as a means of estimating the distance of the earth from the sun, and devised a method for this purpose.

Another method was invented by Delisle about 1743
Both plans were used in Dec. 1874
Expeditions for the accurate observation of the phenomena, on 8 Dec. astronomical day; ordinary day, 9 Dec. 1874, were sent to different parts of the globe by all the great powers, and favourable results have been reported.

The transit, on 6 Dec. 1882, was observed at Bath, Penzance, Cork, Cape Town, Washington, Melbourne, and many other places. The next transits will take place 8 June, 2004, and 6 June, 2012.

VERA CRUZ (Mexico), built about 1600; was taken by the Americans in 1847, and by the allies on 17 Dec. 1861, during the intervention; retaken by the liberals, under Juarez, 27 June, 1867.

It was acquired by the Franks in the sixth century, and formed part of the dominions of Lothaire by the treaty of Verdun, 843, when the empire was divided between the sons of Louis I. It was taken and annexed to the empire by Otho I. about 939. It surrendered to France in 1552; and was formally ceded in 1648. It was taken and held by the Prusains 43 days, Sept.—Oct. 1792. Gen. Beaurepaire, the commandant, committed suicide before the surrender, and 14 ladies were executed on 28 May, 1794, for going to the king of Prussia to solicit his clemency for the town. Verdun surrendered to the Germans 8 Nov. 1870, after a brave defence; two vigorous sallies being made 28 Oct. Above 4000 men were captured, with a large number of arms and ammunition. It was the last place held by the Germans; and was given up 15, 16 Sept. 1873, and the troops retired.

VERGARA, N. SPAIW. Here the Carlist general, Maroto, made a treaty, termed "The pacification of Vergara," with Espartero, 31 Aug. 1839.

The monument to celebrate it was destroyed by the Carlists in Aug. 1873.

VERMANDOIS (N. France), a county given by Charlemagne to his second son Pepin, whose family held it till the 11th century; in 1156 it came, by marriage, to the counts of Flanders; and in 1185 it was seized by Philip II., and incorporated with the monarchy in 1215.

The French at first were successful; but some Lombard auxiliaries, who had taken the English camp, commenced pillaging. Two thousand English archers came then fresh to the attack; and the French and Scots were totally defeated, and their leaders killed.

VERNON GALLERY. The inadequarmanner in which modern British art was represented in the National Gallery was somewhat remedied in 1847 by the munificent present to the nation, by Mr. Robert Vernon, of a collection of 15 pictures, all but two being by first-rate British artists. They were first exhibited at Mr. Vernon's house in Pall-mall, next in the vaults beneath the National Gallery, afterwards at Marlborough House, and are now at the South Kensington Museum. Near to it Charles Albert of Sardinia defeated the Austrians 6 May, 1848. Verona is one of the four strong Austrian fortresses termed the Quadrangle, or Quadrilateral (achiel see), and here the emperor Francis Joseph, on 12 July, 1859, in an order of the day, announced to his army that he must yield to circumstances unfavourable this policy, and thanked his people and army fra their support. VERSAILLES (near Paris) was a small village, in a forest thirty miles in circuit; where Louis XIII. built a hunting-seat about 1632. Louis XIV. between 1661 and 1687 enlarged it into a magnificent palace, which became the usual residence of the kings of France. By the treaty between Great Britain and the revolted colonics of British North America, signed at Paris, the latter power was admitted to be a sovereign and independent state, 3

The palace was converted into an hospital. The royal head-quarters were removed here from Ferrières 5 Oct. After the peace, Versailles became the seat of the French government (see France) March, 1871. Removed to Paris 27 Nov. 1879. The congress for the revision of the constitution met here 4-13 Aug. 1884. See France, 1889.

VERSE, see Poetry, Hexameter, Elegy, Iambic, &c. Surrey's translation of part of Virgit's Eneid into blank verse is the first English composition of the kind, omitting tragedy, extant in the English language (published in 1547). The verse previously used in our grave compositions was the stanza of eight lines, the oftava rima (as adopted with the addition of one line by Spenser in his Faëry. Queene), who probably borrowed it from Ariosto and Tasso. Boccaccio introduced it into Italy in his Tescide, having copied it from the old French chan-sons. Trissino is said to have been the first introducer of blank verse among the moderns, about 1508. Vossius.

A colony of vine-dressers from Phocea, in Ionia, settled at Marseilles, and instructed the South Gauls in tillage, vine-dressing, and commerce, about 600 B.C. Some think that vines are aborigines of Languedoc, Provence, and Sicily, and that they grew spontaneously on the Mediterranean shores of Italy, France, and Spain. The vine was carried into Champagne, and part of Germany, by the emperor Probus, about A.D. 279. The vine and sugar-cane were planted in Madeira in 1420. In the gardens of Hampton-court palace is an old and celebrated vine, said to surpass any known vine in Europe; see Grapes, and Wins. The Tokay vines were planted in 1350.

Vine Disease. In the spring of 1845, Mr. E. Tucker, of Margate, observed a fungus (since named Oidium Tuckeri) on grapes in the hot-houses of Mr. Slater, of Margate. It is a whitish mildew, and totally destroys the fruit.

The spores of this oidium were found in the vineries at Versailles in 1847. The disease soon reached the trellised vines, and in 1850 many lost all their produce.

In 1852, it spread over France, Italy, Spain, Syria, and in Zante and Cephalonia attacked the currents, reducing the crop to one-twelfth of the usual amount

ing the crop to one-twelfth of the usual amount. Through its ravages, the wine manufacture in Madeira ceased for several years.

Many attempts have been made to arrest the progress of this disease, but without much effect. Sulphur dust is the most efficacious remedy.

The disease had much abated in France, Portugal, and Madeira, in 1862. In 1862 Californian vines were introduced into the two latter. Madeira, in 1863. In 1862 introduced into the two latter.

VIOL AND VIOLIN. The lyre of the Greeks became our harp, and the viol of the middle ages became the violin. The violin is mentioned as early as 1200, in the legendary life of St. Christopher. It was introduced into England, some say, by Charles II. Straduarius (or Stradivarius) of Cremona, was a renowned violin-maker (1700 to 1722). The eminent violinist Paganini visited England, 1831; died at Nice, 27 May, 1840.

VIRGINIA, the first British settlement in North America, was discovered by John Cabot in 1497, and was taken possession of and named by Raleigh, after the virgin-queen Elizabeth, 13 July. 1584. Vain attempts were made to settle it in 155. Two expeditions were formed by patent in 1600. and others in 1610. VITAL FORCE, defined by Humboldt "as an unknown cause preventing the elements from obeying their primitive affinities." This theory is now opposed by many physiologists, and animal motion is attributed to muscular and nervous irritability, illustrated by the researches of Galvani, Humboldt, sir Charles Bell, Marshall Hall, and others. subject has been much discussed recently by Huxley and other eminent physiologists.

VITTORIA (N. Spain), the site of a victory obtained by Wellington over the French army commanded by Joseph Bonaparte, king of Spain, and marshal Jourdan, 21 June, 1813. The hostile armies were nearly equal, from 70,000 to 75,000 each. After a long and fearful battle, the French were driven, towards evening, through the town of Vittoria, and in their retreat were thrown into irre-trievable confusion. The British loss was 22 officers and 479 men killed; 167 officers and 2640 men wounded. Marshal Jourdan lost 151 pieces of cannon, 451 waggons of ammunition, all his baggage, provisions, cattle, and treasure, with his baton as a marshal of France. Continuing the pursuit on the 25th, Wellington took Jourdan's only remaining gun.

VIVISECTION. Physiological experiments upon living animals having much increased, the societies for the prevention of cruelty to animals in Dresden and Paris in 1859 requested the opinion of a committee of eminent scientific men on the merits of the knowledge thus acquired. Their judgment was not unanimous. The London society took up the question in 1860; and printed a pamphlet by Mr. G. Macilwain against vivisection. In Aug. 1862 an international conference to discuss the The subject was discussed in 1866, and a prize awarded by the London society. Sir Charles Bell's opinion of vivisection was, that it either obscured the subject if was mars to discussed in 1866. the subject it was meant to illustrate, or misled men into practical errors of the most serious character.

VOLCANOES. In different parts of the earth there are above 200 volcanoes which have been active in modern times; see Etna, Vesuvius, New Zealand, Owhyhee, and Iceland. In Mexico, a plain was filled up into a mountain more than a thousand feet in height by the burning lava from a volcano, in 1759. A volcano in the isle of Ferro broke out

13 Sept. 1777, which threw out an immense quantity of red water, that discoloured the sea for several leagues. A new volcano appeared in one of the Azore islands, I May, 1808.

VOLHYNIA, a Polish province, annexed to Russia 1793.

WOLSCI, an ancient Latin people, frequently at war with the Romans. From their capital, Corioli, Caius Martius (who defeated them about 490 B.C.) derived his name Coriolanus. The story of his banishment by his ungrateful countrymen; of his revenge on them by bringing the Volsci to the gates of Rome, yet afterwards sparing the city at the entreaties of his mother, Volumnia (487 B.C.), is considered by many as a poetical legend. The Volsci and their allies were totally defeated at Sutrium by the consul Valerius Corvus (346), and incorporated with the Roman people about 338.

VOLSINII, the inhabitants of an Etrurian city, who, after a sharp contest, were completely overcome by the Roman consul Titus Coruncanius, 280 B.C.

VOLTAIC PILE or BATTERY, was constructed by Galvani; see Galvanism in article Biestricity. The principle was discovered by Alessandro Volta, of Como (born 1745), for thirty years professor of natural philosophy at Pavia, and announced by him to the Royal Society of London in 1793. The battery was first set up in 1800. Volta was made an Italian count and senator by Napoleon Bonaparte, and was otherwise greatly honoured. While young he invented the electrophorus, electric pistol, and hydrogen lamp. He died in 1826, aged 31. The form of the Voltate battery has been greatly improved by the researches of modern philosophers. The nitric acid battery of sir W. K. Grove was constructed in 1839; Alfred Smee's battery in 1840; the carbon battery of professor Robert Bunsen in 1842. The first is very much used in this country; that of Bunsen on the continent, see Copper-Zinc Couple.

VOLTURNO, a river in S. Italy, near Capua, near to which Garibaldi and his followers held a strong position. This was furiously assailed by the royal troops on 1 Oct. 1860, who were finally repulsed after a desperate struggle, the fiercest in which Garibaldi had yet been engaged. He was aided greatly by a band of Piedmontese from Naples. On 2 Oct. general Bixio completed the victory by capturing 2500 fresh Neapolitan troops and dispersing others.

VOLUNTARY CONTRIBUTIONS. Public contributions for the support of the British government against the policy and designs of France amounted to two millions and a half sterling in 1798. About 200,000l. were transmitted to England from India in 1799. Sir Robert Peel, of Bury, among other contributions of equal amount, subscribed 10,000l. Annual Register; see Patriotic Fund. In 1862 nearly a million pounds were subscribed in the British empire for the relief of the Lancashire cotton spinners; see Cotton and Mansion House, where voluntary contributions for beneficent purposes are continually received.

VOLUNTEERS were enrolled in England for the American war, 1778, and especially in consequence of the threatened invasion of revolutionary France, 1793-4. Besides our large army, and 85,000 men voted for the sea, we subsidised 40,000 Germans, raised our militia to 100,000 men, and armed the citizens as volunteers; the yeomanry formed cavalry regiments. Between 1798 and 1804,

when this force was of greatest amount, it numbered 410,000, of which 70,000 were Iriah; Teomany in 1884, 11,400. On 26 Oct. 1803, king George III. reviewed in Hyde Park 12,401 London volunteers, and on 28 Oct. 14,676 more. The English volunteers were, according to official account, 341,600 on 1 Jan. 1804; see Noval Volunteers. In May, 1859, in consequence of the prevalence of the fear of a French invasion, the formation of volunteer corps of riflemen commenced under the suspice of the government, and by the end of the year many thousands were enrolled in all parts of the kingdom. The volunteers were said to be "a fore potentially the strongest defence of England," to April, 1870; see Artillery Association, and Naval Artillery Volunteer Force.

The first regiment of Irish volunteers was formed at Dublin, under command of the duke of Leinster. 12 Oct. 1779. They armed generally to the amount of 20,000 men, and received the unanimous thanks of the houses of lords and commons in Ireland, for their patriotism and spirit, for coming forward and defending their country. At the period when the force appeared, Irish affairs bore a serious aspect; manufactures had decreased, and foreign trade had been hurt by a prohibition of the export of salted provisions and butter. No notice of the complaints of the people had been taken in the English parliament, when, owing to the slam of an invasion, ministers allowed the nation to arm, and an immense force was soon raised. The Irish took this occasion to demand a free trade, and government saw there was no trifling with a country with arms in its hands. The Irish parliament unanimously addressed the king for a free trade, and it was granted, 1779.

WAGES IN ENGLAND. The wages of sundry workmen were first fixed by act of parliament 25 Edw. III. 1350. Haymakers had but one penny a day. Master carpenters, masons, tilers, and other coverers of houses, had not more than 3d. per day (about 9d. of our money); and their servants, 14d. Viner's Statutes.*

By the 33 Henry VI, the wages of a bailiff of husbandry was 23s. 4d. per annum, and clothing of the price of 5s. with meat and drink; chief hind, carter, or shepherd, 2os., clothing, 4s.; common servant of husbandry, 15s., clothing, 4od.; woman-

By the 11 Henry VII., a like rate of wages with a little advance: as, for instance, a free mason, master carpenter, rough mason, bricklayer, master tiler, plumber, glazier, carver or joiner, was allowed from Easter to Michaelmas to take 6d. a

WAGHORN'S NEW OVERLAND ROUTE TO INDIA. Lieut. Waghorn devoted a large portion of his life to connect India with England. On 31 Oct. 1845, he arrived in London, by a new route, with the Bombay mail of the 1st of that month. His despatches reached Suez on the 19th, and Alexandria on the 20th, whence he proceeded by steamboat to a place twelve miles nearer London than Trieste. He hurried through Austria, laden, Bavaria, Prussia, and Belgium, and reached London at half-past four on the morning of the first-mentioned day. The authorities of the different countries through which he passed eagerly facilitated his movements. The ordinary express, ria Marseilles, reached London 2 Nov. following. Mr. Waghorn subsequently addressed a letter to the Times newspaper, in which he stated that in a couple of years he would bring the Bombay mail to London in 21 days. He died 8 Jan. 1850. On 3 Feb. 1884, at a meeting at the Mansion-house,

* Mr. J. E. Thorold Rogers, "Six Centuries of Work and Wages," published in 1884.

London, it was determined to erect a national monument to his memory.

The Overland Mail, which had left Bombay on r Dec. 1845, arrived early on the 3cth in London, by way of Marseilles and Paris. The speedy arrival was owing to the great exertions made by the French government to show that the route through France was shorter and better.

WAGRAM, a village near Vienua, where Napoleon I. totally defeated the archduke Charles, 5, 6 July, 1800. The slaughter on both sides was dreadful; 20,000 Austrians were taken by the French, and the defeated army retired to Moravia. An armistice was signed on the 12th; and on 24 Oct., by a treaty of peace, Austria ceded all her sea-coast to France; the kingdoms of Saxony and Bavaria were enlarged at her expense; part of Poland in Galicia was ceded to Russia; and Joseph Bonaparte was recognised as king of Spain.

WAHABEES OR WAHABITES, a warlike Mahometan reforming sect, considering themselves the only true followers of the prophet, established themselves in Arabia about 1750, under the rule of Abd-el-Wahab, who died 1787. His grandson, Saoud, in 1801, defeated an expedition headed by the caliph of Bagdad. In 1803 this sect seized

Mecca and Medina, and continued their conquests, although their chief was assassinated in the midst of his victories. His son, Abdallah, long resisted Mahommed Ali, pacha of Egypt, but in 1818 was defeated and taken prisoner by Ibrahim Pacha, who sent him to Constantinople, where he was put to death. The sect, now flourishing, is well described by Mr. W. Gifford Palgrave, in his "Journey and Residence in Arabia in 1862-3," published in 1865. It is influential in India, and is suspected of a tendency to insurrection.

Near it a battle was fought between the adherents of Margaret, the queen of Henry VI., and the duke of York, in which the latter was slain, and 3000 Yorkists fell upon the field, 31 Dec. 1460. The earl of Warwick supported the cause of the duke's son, the earl of March, afterwards Edward IV., and the civil war was continued. An art and industrial exhibition was opened at Wakefield, 30 Aug. 1865. The Bishoprics act, authorising the establishment of a see at Wakefield, was passed 16 Aug. 1878. WALCHEREN (an island at the mouth of the Scheldt, Holland). The unfortunate expedition of the British to this isle in 1809 consisted of 35 ships of the line, and 200 smaller vessels, principally transports, and 40,000 land forces, the latter under the command of the earl of Chatham, and the fleet under sir Richard Strachan. For a long time the destination of the expedition remained secret; but before 28 July, 1809, when it set sail, the French journals had announced that Walcheren was the point of attack. Flushing was invested in August; a dreadful bombardment followed, and the place was taken 15 Aug.; but no suggestion on the part of the naval commander, nor urging on the part of the officers, could induce the earl to vigorous action, until the period of probable success was gone, and necessity obliged him to return with as many of the troops as disease and an unhealthy climate had spared. The place was evacuated, 23 Dec. 1809. The house of commons instituted an inquiry, and lord Chatham resigned his post of master-general of the ordnance, to prevent greater disgrace; but the policy of ministers in planning the expedition was, nevertheless, approved. The following epigram, of which various readings exist, appeared at the time :-

WALDENSES (also called Valdenses, Vall-3ses, and Vaudois), a sect inhabiting the Cettic Alpa, derives its name, according to some authorized from Peter de Waldo, of Lyons (1170). They had translation of the Bible. The Waldenses settled in the valleys of Piedmont about 1375, but were requently dreadfully persecuted, especially in the 17th century, when Charles I. of England interceded them (1627-9) and Oliver Cromwell by threats (1655-6) obtained them some degree of toleration.

WATERLOO BRIDGE, LONDON. A bridge over this part of the Thames was repeatedly suggested during the last century, but no actual pre-parations to carry it into effect were made till 1806, when Mr. G. Dodd procured an act of parliament, and gave the present site, plan, and dimensions of the bridge; but, in consequence of some disagreement with the committee, he was superseded by Mr. John Rennie, who completed this noble structure. It was commenced II Oct. 1811, and opened 18 June, 1817, on the anniversary of the battle of Waterloo, when the prince regent, the duke of Wellington, and other distinguished personages, were present. Its length within the abutments is 1242 feet; its width within the balustrades is 42 feet; and the span of each arch, of which there are nine, is 120 feet. Bought for 475,000l. by metro-politan board of works; opened toll free, 5 Oct. 1878; lit by electric light from 10 Oct. 1879.

WEAVING appears to have been practised in China more than a thousand years before it was known in Europe or Asia. The Egyptians ascribed the art to Isis; the Greeks to Minerva; and the Peruvians to the wife of Manco Capac. Our Saviour's vest, or coat, had not any seam, being woven from the top throughout, in one whole piece.

The print of a frame for weaving such a vest miv be seen in Calmet's Dictionary, under the wor.

WESTERN AUSTRALIA, formerly SWAN RIVER SETTLEMENT, which was projected by colonel Peel in 1828. Regulations issued from the colonial office, and Captain Stirling, appointed lieutenant-governor, Jan. 17, 1829, arrived at the appointed site in August following. The three towns of Perth, Freemantle, and Guildford were founded same year. In March, 1830, fifty ships, with 2000 emigrants, with property amounting to I,000,000i., had arrived before hardly any dwellings had been erected or land surveyed. The more had been erected or land surveyed. The more energetic settlers left for home, or the neighbouring colonies, and the colony languished for twenty years for want of suitable inhabitants—the first settlers, from their previous habits and rank in life, proving unfit for the rough work of colonisation. In 1848, the colonists requested that convicts might be sent out to them, and in 1849 a band arrived, who were kindly received and well treated. The best results ensued. By 1853, 2000 had arrived, and the in habitants of Perth had requested that 1000 should be sent out annually. WESTMINSTER HALL (London), first built by William Rufus in 1097, for a banqueting-hall; and here in 1099, on his return from Normandy, "he kept his feast of Whitsuntide very royally." The hall became ruinous before the reign of Richard II., who repaired it in 1397, raised the walls, altered the windows, and added a new roof, as well as a stately porch and other buildings. In 1236 Henry III. on New-year's day caused 6000 poor persons to be entertained in this hall, and in the other rooms of his palace, as a celebration of queen Eleanor's coronation; and here Richard II. held his Christmas festival in 1397, when the number of the guests each day the feast lasted was 10,000. The Volunteer Rifle corps were drilled in the hall in the winter of 1859, and since. The courts of law removed to the new buildings in the Strand Jan. 1833. Restorations proposed by Mr. J. L. WHEAT. The Chinese ascribe to their emperor, Ching-Noung, who succeeded Fohi, the art of husbandry, and method of making bread from wheat, about 2000 years before the Christian era. Wheat was introduced into Britain in the 6th century, by Coll ap Coll Frewi. Roberts. The first wheat imported into England of which we have a note was in 1347. Various statutes have regulated the sales of wheat, and restrained its importation, in order to encourage its being raised at home. In 1862 attention was drawn to the probable utility of considering the pedigree of wheat. In 1871 it was estimated that 3,571,894 acres in the United Kingdom were devoted to wheat; in 1876, 3,124,342. See Bread, and Corn Laws. Greatest producers (in order), United States, Russia, France, Great Britain, &c. The wheat crop for Great Britain is said to have yielded 71,939,647 bushels in 1888.

WHIGS. In the reign of Charles II, the name Whig was a term of reproach given by the court party to their antagonists for holding the principles of the "whiga," or fanatical covenanters in Soutland; and in return the name Tory was given to the court party, comparing them to the Torics or popish robbers in Ireland. Baker. The distinction. arose out of the discovery of the Meal-tub plot (which see) in 1678. Upon bringing up the most plot before parliament, two parties were formed: the ones who doubted the plot styled those who believed in it Whigs; these styled their adversaries Tories. In time these names, given as marks of opprobrium, became honoured distinctions. Hume. The Whigs brought about the revolution of 1688-9, and established the protestant succession. were chiefly instrumental in obtaining the abolition of the slave trade and slavery, the repeal of the Test and Corporation act, Catholic emancipation, parliamentary and municipal reform, the repeal of the corn laws, and similar measures. WHITEFIELDITES. George Whitefield, the founder of the "Calvinistic Methodists," born 1714, was the son of an innkeeper at Gloucester, where he received his first education. He was admitted a servitor at Oxford in 1732, became a companion of the Wesleys there, and aided them in establishing Methodism. He parted from them in 1741, on account of their rejection of the doctrine of election. He was the most eloquent preacher of his day. His first sermon was preached in 1736, and he commenced field preaching in 1739. He is said to have delivered 18,000 sermons during his career of 34 years. He visited America in 1737, 1739, and 1744. His followers are termed "the countess of Huntingdon's connexion," from his having become her chaplain in 1748, and from her energetic support of the sect, by establishing a college at Trevecca, 1767. See Spafields. There were 109 chapels of this connexion in 1851; but many of his followers have joined the Independents. He died 30 Sept. 1770, and the countess died 17 June 1791; see Tabernacle.

WHITEHALL (London), built by Hubert de Burgh, earl of Kent, before the middle of the 13th century. It afterwards devolved, by bequest, to the Black Friars of Holborn, who sold it to the archbishop of York, whence it received the name of York-place, and continued to be the town residence of the archbishops till taken by Henry VIII. from cardinal Wolsey, in 1530. At this period it became the residence of the court. Queen Elizabeth, who died at Richmond in 1603, was brought from thence to Whitehall, by water, in a grand procession. was on this occasion, Camden informs us, that the following quaint panegyric on her majesty was written:

"The queen was brought by water to Whitehall, At every stroke the oars did tears let fall. More clung about the barge: fish under water Wept out their eyes of pearl, and swam blind after. I think the bargemen might, with easier thighs, Have rowed her thither in her people's eyes; For howsoe'er thus much my thoughts have scann'd, She had come by water, had she come by land.

She had come by water, has she come by kana. Whitehall was partly burnt 9-10 April, 1691; totally destroyed by fire, 4 Jan. 1697-8, except the banqueting-house, which had been added to the palace of Whitehall by James I., according to a design of Inigo Jones, in 1619. In the front of Whitehall Charles I. was beheaded 30 Jan. 1649. George I. converted the hall into a chapel 1723-4. The exterior of this edifice underwent repair between 1829 and 1833.

WHITE ROSE, ORDER OF THE, includes men and women of many shades of opinion, agreeing on one point, that all authority comes from above, utterly independent of the will of the people. They regard the revolution of 1688 as a national crime, and Jacobitism as true loyalty. The order has no religious test, its sole object being to maintain the doctrine of the divine right of kings, and revive public interest in the sufferings of the house of Stuart. (Feb. 1888.)

It measures 116 feet by 96, and is 02 feet in height: the walls, which are 11 feet thick, having a winding staircase continued along two of the sides, like that in Dover Castle. It contains an extensive armoury. Within this tower is the ancient chapel of St. John, originally used by the English monarchs. WHITTINGTON'S CHARITIES. Sir Richard Whittington, a citizen and mercer of London, served the office of lord mayor three times, the last in 1419. Many false stories are connected with his name, and his munificent charities are little known. He founded his college, dedicated to the Holy Ghost and the Virgin Mary, in 1424; and his almshouses in 1429; the latter, originally built in London, now stand on Highgate-hill (built 1808) near the supposed site of the supposed famous stone which commemorated the legend of his return to London, after leaving it in despair.

Power is a heavy burden, because one cannot always do all the good one could wish, and because your contemporaries seldom render you justice, so that, in order to fulfil one's mission, one must have faith in, and consciousness of, one's duty. It is necessary to consider that from heaven on high those whom you have loved regard and protect you; it is the soul of my illustrious uncle that has always inspired and sustained me. trious uncle that has always inspired and sustained me. The like will apply to my son, for he will always be worthy of his name. I leave to the empress Eugenie all my private property. It is my desire that on the majority of my son she shall inhabit the Elysée and Biarritz. I trust that my memory will be dear to her, and that after my death she will forget the griefs I may have used her. With regard to my son, let him keep as a

WINCHESTER (Hampshire), a most ancient city, whose erection may reasonably be ascribed to the Celtic Britons, with the fabulous date 392 B.C. It was made the capital of the West Saxon kingdom under Cerdic, about 520; and of England by Egbert, 827; it became the residence of Alfred, 879-991. In the reign of William I. London began to rival it; and the destruction of religious houses by Henry VIII. almost ruined it. Several kings resided at Winchester, and many parliaments were held there. Memorials of its ancient superority exist in the national denomination of measures of quantity, as Winchester ell, Winchester bushel, &c., the use of which has but recently been replaced

by imperial measures. The cathedral church was first founded and endowed by Cynegils, or Kenegilsus, the first Christian king of the West Saxons. Becoming ruinous, the present fabric was begun by bishop Walkelyn, the 34th bishop, 1073. He assessed every county in England to send him workmen. James I. of Scotland was imprisoned here, 1406-23. Several additions were made by Henry VIII. WIVES, see Marriage. By the Divorce and Matrimonial Causes Act, passed in 1857, the con-dition of married women has been much benefited. When ill-used they can obtain a divorce or judicial separation; and while in the latter state any property they may acquire is secured to them personally, as if unmarried. By another act passed in 1857, they are enabled to dispose of reversionary interests in personal property or estates. An act to amend the law relating to the property of married women was passed 9 Aug. 1870. By it the separate earnings of a wife were secured to her own use, as well as personal and freehold property bequeathed to her. She may maintain an action at law, and acquires other rights. The husband is declared not liable for debts contracted by his wife prior to marriage, and she may be sued for them. This act was amended in 1874. WCERTH SUR SAUER, a town in the department of the Lower Rhine, N.E. France. After storming Wissembourg (which see) on 4 Aug. 1870, the crown-prince of Prussia, with the 3rd army (about 150,000) marched rapidly forward and surprised part of the French army under Marshal MacMahon, including the corps of Canrobert and part of that of Failly (about 47,000), and defeated it in a long, desperate, and sanguinary engagement near this place 6 Aug. The battle lasted from 9 a.m. till 4 p.m. The chief struggles occurred in the country round Reichshoffen and in the village of Frœschweiller; the French are said to have charged the German line eleven times, each time breaking it, but always finding a fresh mass behind. The ridge on which Worth stands was not captured until the French were taken in flank by the Bavarians and Würtembergers. Nearly all Mac-Mahon's staff were killed, and the marshal himself, unhorsed, fell fainting into a ditch, from which he was rescued by a soldier. He then, on foot, directed the retreat towards Saverne, to cover the passes of the Vosges. The victory is attributed to the very great numerical superiority of the Germans as well as to their excellent strategy. The French loss has been estimated at 5000 killed and wounded, and 5,000 prisoners, 2 eagles, 6 mitrailleuses, 35 can-non, and much baggage. The Germans are stated to have had above 8000 men put hors de combat. It was admitted that MacMahon had acted as an able and brave commander.

Luther was met by 2000 persons on proscribed. Luther was met by 2000 persons on foot and on horseback, at the distance of a league from Worms. When Spalatin sent to warn him of his danger, he answered, "If there were as many devils in Worms as there are tiles upon the roofs of its houses, I would go on." He appeared before the emperor, the archduke Ferdinand, six electors, twenty-four dukes, seven margraves, thirty bishops and relates and many represe counts, lords, and and prelates, and many princes, counts, lords, and ambassadors, 17 April, acknowledged his writings and opinions, and left Worms, in fact, a conqueror. Yet, to save his life, he had to remain in seclusion under the protection of the elector of Saxony for about a year. The ediet putting him under the ban of the empire was issued 26 May, 1521. Worms was burnt, by order of Louis XIV., 1689, the cathedral excepted; and was taken by the French, under Custine, 4 Oct. 1792. A memorial statue of Luther at Worms was considered. Luther at Worms was uncovered, 25 June, 1868, in the presence of the king of Prussia and other sovereigns.

XANTHICA, a military festival observed by the Macedonians in the month called Xanthicus (our April), instituted about 392 B.C.

XANTHUS, Lycia, Asia Minor, was taken by Harpagus for Cyrus, about 546 B.C., when the inhabitants buried themselves in the ruins. It was besieged by the Romans under Brutus 42 B.C. After a great struggle the inhabitants set fire to their city, destroyed their wives and children, and perished. The conqueror wished to spare them, and offered rewards to his soldiers if they brought any of the Xanthians into his presence, but only 150 were saved. *Plutarch*.

XERES DE LA FRONTERA (S.W. Spain), the Asta Regia of the Romans, and the seat of the wine-trade in Spain, of which the principal wine is that so well known in England as Sherry, an English corruption of Xeres. Xerxes crossed the Hellespont by a bridge of boats, and entered Greece in the spring of 480 B.C., with an army which, together with the numerous retinue of servant, eunucha, and women that attended it, amounted (according to some historians) to 5,283,220 smil, elevations that attended it, amounted (according to some historians) to 5,283,220 smil, enveying 1,700,000 foot, besides cavalry and the marines and attendants of the camp. This multitude was stopped at Thermopyles (schick ser) by the valour of 300 Spartans under Leonidas, ~Q Aug. 480 B.C. The fleet of Xerxes was defeated at Artemisium and Salamis, 20 Oct. 480 B.C.; and he hastened back to Persia, leaving behind Mardonius, the best of his generals, who, with an army of 300,000 men, was defeated and alain at Platza, 22 Sept. 479 B.C. and Russia, 1875. YEAR. The Egyptians, it is said, were the first who fixed the length of the year.

The Roman year introduced by Romulus, 738 B.C.; corrected by Numa, 713 B.C.; and again by Julius Cæsar, 45 B.C. (see Calendar).

The solar or astronomical year was found to comprise 365 days, 5 hours, 48 minutes, 51 seconds, and 6 decimals,

265 B.C.
The lunar year (twelve lunar months, or 354 days, 8 hours, 48 minutes) was in use amongst the Chaldaeans, Persians, and Jews. Once in every three years was added another lunar month, so as to make the solar and the lunar year nearly agree. But though the months were lunar, the year was solar; that is, the first month was of thirty days, and the second of twenty-nine, and so alternately: and the month added triennially was called Ve-Adar or the second Adar. The Jews afterwards followed the Roman manner of computation. computation.

The sidereal year, or return to the same star, is 365 days,

The sucreal year, or return to the same star, is 305 days, 6 hours, 0 minutes, 11 seconds.

The Jews dated the beginning of the sacred year in March, and civil year in September; the Athenians began the year in June; the Macedonians on 24 Sept.; the Christians of Egypt and Ethiopia on 29 or 30 Aug.; and the Persians and Armenians on 11 Aug. Nearly all Christian nations now commence the year on 1 Industrial January.

January.

In France, the Merovingian kings began the year with March; the Carlovingians sometimes began the year with Christmas, 25 Dec.; and sometimes with Easter, which, being a movable feast, led to much confusion. Charles IX. of France, in 1564, published an arret, the last article of which ordered the year for the time to

come to be constantly and universally begun, and written on and from 1 January. The beginning of the year has been reckoned from the day celebrating the birth of Christ, 25 Dec.; his cir-cumcision, 1 Jan.; his conception, 25 March; and his resurrection, Easter.

The English began their year on the 25th of December, until the time of William the Conqueror. This prince having been crowned on r Jan. gave occasion to the English to begin their year at that time, to make it e with the then most remarkable period of their ory. Stow. Until the act for altering the style, history. Stow. Until the act for altering the style, in 1752 (see Style), when the year was ordered to begin on Jan. 1, it did not legally and generally commence in England until 25th March. In Scotland, commence in England until 25th March. In Scotland, at that period, the year began on the 1st of January. This difference caused great practical inconveniences; and January, February, and part of March sometimes bore two dates, as we often find in old records, 1745-1746. Or 1745-6, or 1745-8 to a reckoning often det to chronological mistakes; for instance, we popularly say the "revolution of 1688," as that event was completed in February, 1688 according to the than modeled in February, 1688 according to the than modeled. pleted in February, 1688, according to the then mode of computation: but if the year were held to begin, as it does now, on the first of January, it would be the revolution of 1689.

he year in the northern regions of Siberia and Lapland is described in the following calendar, given by a traveller:—"23 June, snow melts. 1 July, snow gone. 9 July, fields quite green. 17 July, plants at full growth. 25 July, plants in flower. 2 July, fruits ripe. 10 Aug., plants shed their seed. 18 Aug., snow." The snow continues upon the ground from 18th Aug. of one year to 23rd June of the year following, being 300 days out of 365; so that while the three seasons of spring, summer, and autumn are together only fifty-six days, or eight weeks, the winter is of forty-four weeks' duration in these countries. duration in these countries.

Year or The Reion. From the time of William the
Conqueror, 1066, the year of the sovereign's reign has
been given to all public instruments. The king's
patents, charters, proclamations, and all acts of parliament have since then been generally so dated. The
same manner of dating is used in most of the European
states for all similar documents and records; see List of Kings under England.

YEAR AND A DAY. A space of time in law, and in many cases establishes and fixes a right; as in an estray, on proclamation being made, if the owner does not claim it within the time, it is forfeited. The term arose in the Norman law, which enacted that a beast found on another's land, if unclaimed for a year and a day, be-longed to the lord of the soil. It is otherwise a legal space of time.

YEAR-BOOKS contain reports in Norman-French of cases argued and decided in the courts of common law. The printed volumes extend from the beginning of the reign of Edward II. to nearly the end of the reign of Henry VIII., a period of about 220 years; but in this series there are many omissions. These books are the first in the long line of legal reports in which England is so rich, and may be considered as, to a great extent, the foundation of our unwritten law, "Lex non scripta." In 1863 et seq. various year-books of Edward I. (1292-1304) edited by Mr. A. J. Horwood, for the series of the Chronicles and Memorials, were published at the expense of the British government.

YEW-TREE (Taxus). The origin of planting yew-trees in churchyards was (these latter being fenced) to secure the trees from cattle, and in this manner preserve them for the encouragement of archery. A general plantation of them for the use of archers was ordered by Richard III. 1483. Stor. Chron. It raged with unparalleled violence at Philadelphia in Oct. 1762; and most awfully at in the survey taken of Richmond palace in 1649, is said to be still existing.

YEZIDIS, an eastern tribe, living near the Euphrates, visited by Mr. Layard in 1841: see Devil Worship.

YEZDEGIRD, or PERSIAN ERA, was formerly universally adopted in Persia, and is still used by the Parsees in India, and by the Arabs, in certain computations. This era began on the 26th June, 632, when Yezdegird was elected king of Persia. The year consisted of 365 days only, and therefore its commencement, like that of the old Egyptian and Armenian year, anticipated the Julian year by one day in every four years. This difference amounted to nearly 112 days in the year 1075, when it was reformed by Jelaledin, who ordered that in future the Persian year should receive an additional day whenever it should appear necessary to postpone the commencement of the following year, that it might occur on the day of the sun's passing the same degree of the ecliptic.

YORK MINSTER (dedicated to St. Peter). THE first Christian church erected here, which appears to have been preceded by a Roman temple, was built by Edwin, king of Northumbria, of wood, about 625, and of stone about 635. It was again destroyed by nre in the year 1069, and rebuilt by archbishop Thomas, of Bayeux. It was once more burnt down in 1137, with St. Mary's abbey, and 39 parish churches in York. Archbishop Roger huit the choir, 1154-81; Walter Gray added the south transept in 1227; John de Romayne, the treasurer of the cathedral, built the north transept in 1250. His son, archbishop Romanus, laid the foundation of the nave in 1291. In 1330, William de Melton built the two western towers, which were finished by John de Birmingham in 1342. Archbishop Thoresby, in 1361, began to rebuild the choir, in accordance with the magnificence of the nave, and he also rebuilt the lantern tower. The minster was set on fire by Jonathan Martin, a lunatio, and the roof of the choir and its internal fittings destroyed, 2 Feb. 1829; the damage, estimated at 60,000l., was repaired in 1832 under sir Robert Smirke.
